New sprayer fights cable-boring beetles. Astounding as it may seem, there's a kind of beetle that can eat right through the lead cover of a telephone cable. The beetle's so tiny it's hard to see. But the hole it leaves can let harmful moisture inside a cable. To prevent this, telephone people use a special repellent, which used to be brushed on cables entirely by hand. But the new sprayer—pulled by a man on the ground—puts the repellent on three times faster. By saving valuable time, this cuts the cost of guarding cables. So it's a big help in bringing you good telephone service that's high in value and low in price. Pacific Telephone works to make your telephone a bigger value every day.
