STRAIGHT FACTS ON AMMONIA FERTILIZATION

What growers have found about Shell's sure way with NH₃

FULL STRENGTH NITROGEN

Shell NH₃ is guaranteed a full 82% nitrogen, all of it available to the plant. It is the richest source of nitrogen available to plant roots. This full strength nitrogen fertilizer contains more than four times as much nitrogen by weight as water solutions of ammonia nitrogen.

WIDESPREAD PLACEMENT

NH₃ applied under pressure with specially-developed equipment spreads out laterally from the shank. The nitrogen placement area is 10-20 times larger than with other kinds of fertilizers. Young plants with limited root systems start feeding easily from this big nitrogen area.

DEEP ROOT ZONE FERTILIZATION

Leading experiment station tests show deep applications of ammonia nitrogen (down 6", as Shell applies it) definitely give higher yields. Placement at 6" depth where the soil temperature is cool also assures full retention of the ammonia by soil particles.

MAXIMUM SOIL BENEFITS

Ammonia in the anhydrous form tends to reduce soil alkalinity during nitrification. It also increases the solubility of other essential plant foods. Independent laboratories have made soil studies after ammonia applications in which as much as ten years' normal supply of ammonia was applied to the soil within a few months without impairment of the tilth and water penetration of the soil. In all tests the tilth and water penetration were unimpaired.

EASY, FLEXIBLE APPLICATION

Shell NH₃ applications save you time and labor required to apply many other ammonia fertilizers. Shell NH₃ is delivered to the field, and since it is 82% nitrogen, it goes further...results in less down time. The time of application is up to you, because Shell NH₃ stays in the root zone until used by the plant. Shell NH₃ may be applied on wheatland, for example, after harvest, during the cultivating season or at planting time.

FAST DELIVERY

Shell's huge new NH₃ storage facilities at Pasco assure you quick delivery of the amount of NH₃ you need when you need it. Besides having a quick source of supply, your Shell NH₃ dealer has the know-how to make sure each application produces the best results. He's a local man. When you deal with him you get the benefit of his years of experience with local crops and soils. Plan your fertilizing program now with your Shell NH₃ dealer.
