How Standard invested its money last year to meet your growing oil needs

New Refinery Units to make higher octane gasoline took a big part of the \$30 million we spent for plant improvement.

Petrochemicals for plastics and other new products; fertilizers and sprays for bigger crops, took a \$20 million investment.

Research and technical services cost nearly \$13 million. One result was a technique which promises to greatly increase yields from oil wells, helping conserve U.S. resources.

Transportation Facilities to bring our products from oil field to you were a \$10 million item.

New and Modernized Service Stations from Alaska to Mexico cost \$16 million, made Standard products more convenient for you.

Exploration for new oil sources cost \$134 million. Standard Oil Company of California produced oil and gas from more than 8600 wells in the U.S., Canada and South America to supply your petroleum needs.

Petroleum progress means... to keep pace with your needs, oil companies must invest \$74 billion in new U.S. facilities by 1965

1956 1965
Demand for petroleum products will increase about 50% over the next ten years

STANDARD IMPROVED its ability to serve you last year by investing \$347 million for new production and distribution facilities and exploration. The rest of our \$1 1/2 billion income was spent on such items as wages and benefits for our 36,369 employees, supplies from more than 10,000 U.S. firms and crude oil from independent producers. We paid a \$107 million tax bill, and our 119,793 stockholders received 7¢ of each dollar we took in as a return on their investment in the Company.
