GRAIN GROWERS CUT COSTS WITH "NO-LIFT-NO-LUG" NITROGEN SERVICE

it soaks in

it stays put

it pays off!

OUR MECHANIZED FIELD-SIDE SERVICE saves you manpower and equipment time on storage, handling, hauling and applicator loading.

MECHANIZED REFILL cuts applicator loading time and labor 70-80 percent. High-speed transfer pumps do the work faster, better.

Why are grain growers in a major swing to Brea Aqua Ammonia from non-solution types of nitrogen? (Rate of change-over 26 to 1 in some areas.)
The big answer is big yields and better profits! And better profits result because Brea Aqua handles faster and easier above ground... then out-performs other nitrogen carriers below ground. (Up to 20-30 percent in official production tests.)
Our field-side handling, loading and drill application are fully mechanized. Application tanks are refilled with high-speed transfer pumps which cuts loading time. One man keeps a rig rolling and covers more acreage, more quickly, because this liquid fertilizer permits faster ground speeds with less draw-bar pull.
Brea Aqua provides the long-sought answer to ideal drill application. It soaks nitrogen into the soil and gets young grain off to a healthy start. Brea Aqua stores exceptionally well in the soil too, and feeds nitrogen to growing grain continuously, over a long period.
Talk to us about combining soil preparation with fall injection for even greater savings of time and money. Let us give you proof that "no lift, no lug" fertilizing with Brea Aqua Ammonia means bigger grain profits.

Just call us and we'll come out and show you how Brea Aqua solutions can make more money for you.
