From where I sit... by Joe Marsh

Barnyard "WHOOdonit"

The Barn Owl Controversy still rages in our town. One group claims owls should be protected because they eat vermin. The other faction holds that those little howlers also eat chickens... and should be shot.

Now Pops Parker claims both parties are right. All owls clean up vermin. Some owls also clean out an occasional hen yard.

The way to spot a bad owl, according to Pops, is to put up a 10-foot pole in the chicken run with a No. 2 trap on it. A marauding bird generally perches to

look over the situation before he strikes, giving you your evidence, and the culprit!

From where I sit, I doubt if this will end the owl argument. People have different opinions on the subject—just as they have different opinions about whether beer, tea or what-have-you makes the best thirst quencher. Examine the facts and make up your own mind, I say... and be thankful we live where that's possible.

Oil Progress Week* lasts all through the year at Standard

Finding new oil is vital. By 1965 America's needs will rise 20%. To locate additional oil deposits, Standard geologists explored 33 states and 40 countries last year on foot, in planes and even in specially designed "swamp buggies" (above). As a result, we found substantial new reserves for your future use... this is Oil Progress.

Producing oil for more and more uses led us to far places... even to man-made "islands." Last year, in the Western Hemisphere alone, Standard drilled 107 test wells—many in remote spots. But even with new sources harder to find we added nearly three times as much oil to reserves as we took from the ground... this is Oil Progress.

Standard puts oil to work for better living in hundreds of products... asphalt roads for safe, comfortable driving; gasolines, oils and tires; wrinkle-resistant fabrics; stronger plastics; detergents to make housework easier; wax for candles and food cartons; plant foods; even cosmetics, salves and ointments... this is Oil Progress.

Research in oil promises new products... plastics strong as steel; new synthetic fibres; better insecticides. Even commercial atomic power is closer with new Standard-developed oils. In atomic machinery they last two to three times longer under radiation that makes some petroleum oils hard enough to drive nails... this is Oil Progress.

*October 14 to 20 is Oil Progress Week, a reminder that 15,000 oil industry researchers produce an average of six new inventions every working day.

A FEW POINTS

about the claim that
"nobody in this generation has done more to develop wildlife resources than Doug McKay"

A RECENT MCKAY AD ERECTED A BLIND OF MISSTATEMENTS TO COVER UP MCKAY'S DISSERVICE TO SPORTSMEN AND ALL LOVERS OF NATURE WHEN HE OPENED UP FEDERAL FISH AND WILDLIFE SANCTUARIES TO EXTENSIVE OIL LEASING.

READ HOW A UNANIMOUS REPORT OF THE FISHERIES COMMITTEE OF CONGRESS (12 Republicans, 17 Democrats) REFUTES THESE MCKAY CLAIMS

THE MCKAY MISSTATEMENTS

BIPARTISAN REPORT OF FACTS

"So on August 31, 1953, he (McKay) issued an order suspending leasing by the Bureau of Land Management—the order to remain in effect until new adequate regulations could be drawn. It wasn't until two years... that selected areas were reopened for leasing under new regulations."

"Notwithstanding the fact that a stop order was issued... directing the suspension of action on all oil and gas leases then pending, 60 leases were granted between the issuance of the suspension order and the issuance of new regulations..." (Unanimous Report, pp. 10, 11)

"One of the noteworthy provisions of the new regulations for the first time gives the Fish and Wildlife Service veto authority over proposed leases."

"Superficially, these regulations appear to give a veto power to the Fish and Wildlife Service. However, under applicable laws, oil and gas leasing in wildlife lands is a matter solely within the discretion of the Secretary of Interior." (Unanimous Report, p. 11)

"Wildlife reserves were... protected under Secretary McKay".

"Such increased activity in the issuance of leases by the Secretary of Interior... can only result in serious damage to the wildlife refuge systems in this country." (Unanimous report, p. 11)
