TREES ARE A CROP in America. Each year more than half a billion forest tree seedlings are planted on farms, industrial forests and public-owned properties. For each tree planted by man, millions more spring up naturally from seed. If managed wisely and protected from fire, our forest lands will continue to grow all the wood this Nation needs.

Today's gasoline has far more value. An accurate way to measure this value is by "ton-miles" . . . the number of miles a gallon of gasoline will move a ton of car. Average performance in 1930 was 25 ton-miles per gallon. Today it's 43 — or 70% more work per gallon.

Can you think of any liquid that costs less than gasoline . . . except water?

Quart for quart, gallon for gallon, almost any liquid you buy costs more than gasoline . . . and gasoline performance today costs less than it did in 1930.

Fuel cost per ton-mile is down 18% since 1930. To move a ton of car a mile took 2/3¢ worth of fuel. Modern gasolines move today's heavier cars a ton-mile for about 1/2¢. When you remember you are buying performance, gasoline costs less today than in 1930.

In spite of higher operating costs in the oil industry, gasoline prices have been held down through research and intense competition. Since 1930 the price of gasoline (excluding taxes) rose only 23%. During the same period the general cost of living went up 70%.

The taxes on a tankful of gasoline would buy between four and five extra "tax-free" gallons. Combined state and federal taxes, which help pay for better roads, add about 9¢ to the price of every gallon . . . nearly 30% of your gasoline dollar buys no gasoline at all.
