Medicine To Produce Health, As To Examine Disease

By Phil Blakney
Modern practice of medicine differs greatly from old methods. A research team of scientists, pharmaceutical chemists and physicians are continually studying the cause of the different diseases. Once they are known, it is only a matter of time before cures are discovered. Physicians now have better methods of diagnosis and treatment. Medicines are formulated to attack the use. Sometimes, if we have no known chemical it will help, our chemists invent one by synthesis. It is why the medicines a physician now prescribes can help you more than ever before.
