Blessings On Him That Invented Sleep"

By Phil Blakney

A good night's sleep restores the energy we expend during the day, giving us the strength necessary to fight off the invading germs and virus that are constantly attacking our body. Inability to sleep is one of nature's warnings of possible approaching sickness. It is unwise and sometimes even dangerous to repeatedly take sleep-producing remedies without a physician's supervising care. Sleep is needed, but of greater importance is the curing of the cause of sleeplessness. Only a physician has the knowledge to prescribe the proper medication to accomplish this.
