## This small world gets bigger every year

The exciting world within a drop of oil keeps growing as we make discoveries that bring new and better products into your world.

Even now, these products enter every hour of your day — from automotive fuels and lubricants to synthetic fibers for blankets you sleep under at night and clothes you wear during the day.

Wax containers that preserve food; plastics, paints, photographic film, detergents, medicines, synthetic rubber and thousands of other items for farms, homes, industry and the Armed Forces now are made better because of oil ingredients which Standard supplies to manufacturers.

But there's more in oil's future — much more. And so last year, as every year, one of our biggest jobs was finding ways to make oil serve you better — using research to create new and improved products, and building facilities to put these products to work.

Here are some of the things we did during 1958 to expand the world within a drop of oil:

To help meet your growing demand for petroleum products, we invested \$235 million for exploration and development in 21 states of the U.S. and 12 other Western Hemisphere countries.

Our research and technical service staff has grown to 1400 people. Today we make more than 1000 products not sold 15 years ago. During that time our research budget more than tripled.

Producing and distributing products takes continuing investments in new refinery equipment, pipelines, tankers, trucks and trailers. Last year, \$108 million went into these new facilities.

Our 38,395 employees were paid \$281 million in wages and benefits. Standard's 152,754 stockholders received nearly 4¢ for each dollar of the market value of stockholdings.

Standard was one of the largest customers in the West. Our purchases included 50,000 items... helped provide jobs and payrolls for more than 10,000 firms in hundreds of Western communities.

Through affiliates, we helped advance progress in more than 70 free Eastern Hemisphere countries. Oil development helps provide jobs; supplies funds for education, health and housing.

## Get MORE Profits From FEWER Acres

### APPLY YIELD-INCREASING PHILLIPS 66 AGRICULTURAL AMMONIA

It's just good business to get maximum profits from each acre of land you farm. One of the biggest problems you face as a farmer is the fixed cost of producing a crop. These costs are the same whether you get high or low yields. But you can make more profit and lower your total unit production costs by growing more crops on less acreage. Successful farmers know from experience that proper fertilization and other good farm management practices help produce higher yields and resulting higher profits.

Adequate nitrogen is essential to produce maximum yields of cash crops. Phillips 66 Agricultural Ammonia is 82% nitrogen... more nitrogen per dollar than you can get in any other form of commercial fertilizer available. Plan now to get higher yields of more marketable crops by applying Phillips 66 Agricultural Ammonia.
