Bright Futures Seen For Beef Cattle Industry in Oregon

Oregon has the right combination of resources and market potential to make the future bright for the state's beef cattle industry, forecasts Marion Thomas, Oregon State College extension agricultural economist.

But, he emphasized, to make the best eating, Oregon cattle need to spend some time in feedlots.

Six factors prompting the agricultural economist to predict further growth in the beef cattle industry include:

1. Oregon cattle and feed raisers are near the fastest-growing group of highly-paid beef eaters in the world. He pointed out that the West Coast population has grown by more than one-third in the past 10 years and is expected to gain nearly as fast in the next 10 years.

2. Oregon has cattle to feed—more than 600,000 calves are born in Oregon each year. This is 50 percent more than 10 years ago. More than two-thirds of these are beef calves. Besides calves and yearlings, Oregon cattle herds yield about 75,000 cows each year. These numbers can be increased by rangeland improvement, shifting land and feed from other uses, supplemental feeding, and other methods as economic conditions warrant.

3. Supply of grain available has been record large, and will continue to be.

4. Feeding of hay could be increased, for pelleting and wafers make it more feasible to move hay into production areas.

5. Wheat could be available for feeding in substantial amounts if federal legislation were changed to permit pricing at feed levels.

6. Oregon has the marketing facilities to move cattle to feedlots and beef products to consumers.

On the other side of the picture, Thomas pointed out that a feedlot needs to operate on a year-round basis and handle

relatively large amounts of livestock and feed to be efficient and successful.

This takes people with know-how and relatively large amounts of capital. The know-how can be learned from county extension agents, feed companies, marketing agencies, farm press and others.

The capital is available when necessary terms can be met, Thomas said. Reluctance to put capital into cattle feeding ventures should gradually give way as opportunities are recognized and as experience builds confidence.

Mr and Mrs Harry Bongers drove Sisters Frances Ann, Mary Claudette, and Marilyn Ann to Portland Sunday. They had been the instructors for the Catholic Bible classes which were completed last week.

Mr and Mrs Harold McEowen and family of Kingsville, Texas visited the Harry Bongers one day last week.

Since Tiros I was put into orbit, the OSC observations have been stepped up even more so that precipitation patterns gained from the 300-mile range radar can be compared and correlated with cloud patterns photographed by the satellite.

The weather radar studies at OSC have been financed during the past five years by \$160,000 in research grants from the National Science Foundation and the U S Army Signal Corps Engineering Laboratory.

For students interested in meteorology, Tiros I also opens tremendous new career fields in Satellite meteorology, Decker noted. OSC is one of only 16 colleges in the country that prepares students for jobs as professional meteorologists.
