**COMMUNICATIONS HISTORY** was made August 12 when a message typed by President Eisenhower was sent coast-to-coast via an artificial earth satellite. As shown in this artist's sketch, the message was sent from Jet Propulsion Laboratory (at left) in California. The high frequency microwaves bounced off the 100-foot diameter satellite 1000 miles above the earth, and were received at the Bell Telephone Laboratories at Holmdel, New Jersey. The space communications experiment, known as Project Echo, is a joint venture of the National Aeronautics and Space Administration, Bell Telephone Laboratories and the Jet Propulsion Laboratory. Since the first message was sent, two way phone conversations have been successfully relayed via the Echo satellite between New Jersey and California.

## Wheat Needs NITROGEN

### ... and Phillips 66 AGRICULTURAL AMMONIA contains 82% nitrogen!

Apply Phillips 66 Agricultural Ammonia after wheat harvest or before planting. When you apply nitrogen in the fall, it helps decompose the stubble more quickly and increases the soil's population of beneficial bacteria.

Nitrogen on fall-seeded grains means bonus grazing this fall. The faster, lush green growth stimulated by the nitrogen gives greater carrying capacity this fall and again next spring. Nitrogen enables the sturdier plants to make better use of available subsoil moisture.

So, for more profit per acre from your wheat, see us about Phillips 66 Agricultural Ammonia, the 82% nitrogen fertilizer.
