Wheat Growers Slate Meeting October 28

By EUGENE WINTERS
Morrow County Agent

The Morrow County Wheat Growers Association's annual fall meeting is scheduled for next Thursday, October 28, in the parish hall of Saint Patrick's Catholic church in Heppner. The meeting will start at 9:30 a.m. with a luncheon program break at noon in the parish hall.

Bob Jepsen, association president, and the executive board are making plans for a speaker to explain the new farm program.

This week the executive board is attending the Wheat League workshop in Pendleton.

Hybrid Wheat Research Shows Promising Future

We are hearing a little more each year on the possibilities of hybrid wheat. The 1965 hybrid wheat yields at Kansas State University confirm that hybrid wheat will increase yields 20 to 30 percent—just as hybridization of corn and grain sorghums did.

For the present, hybrid wheat yields continue to look promising on the basis of research work done in Kansas. However, the cost of producing such seed on a commercial basis is yet to be determined.

There is some indication that hybrid wheat seed may be available commercially in five or so years.

Restrictions Changed On Use of Two Herbicides

Within the last three weeks there have been two changes in restrictions of herbicides used for weed control.

Tordon (picloram) has clearance now for spot treatment on cropland. Areas treated must be removed from production. Under Morrow county conditions, Tordon applied at the recommended rate will practically insure no production of seeded crops for two years.

Tordon has given excellent results for the control of deep rooted perennial weeds such as Morning Glory, Canada Thistle and Russian Knapweed.

Tordon may be applied any time during the growing season when there is no frost in the soil.

The "Karamex" diuron label has now been changed to include all wheat growing areas with an annual rainfall of 10 inches and above. Previously this material was registered for use on wheat where annual rainfall was 16 inches and above.

Properly timed applications of diuron have controlled a number of annual weeds and grasses. This treatment will not control perennial weeds such as Morning Glory or Canada Thistle.

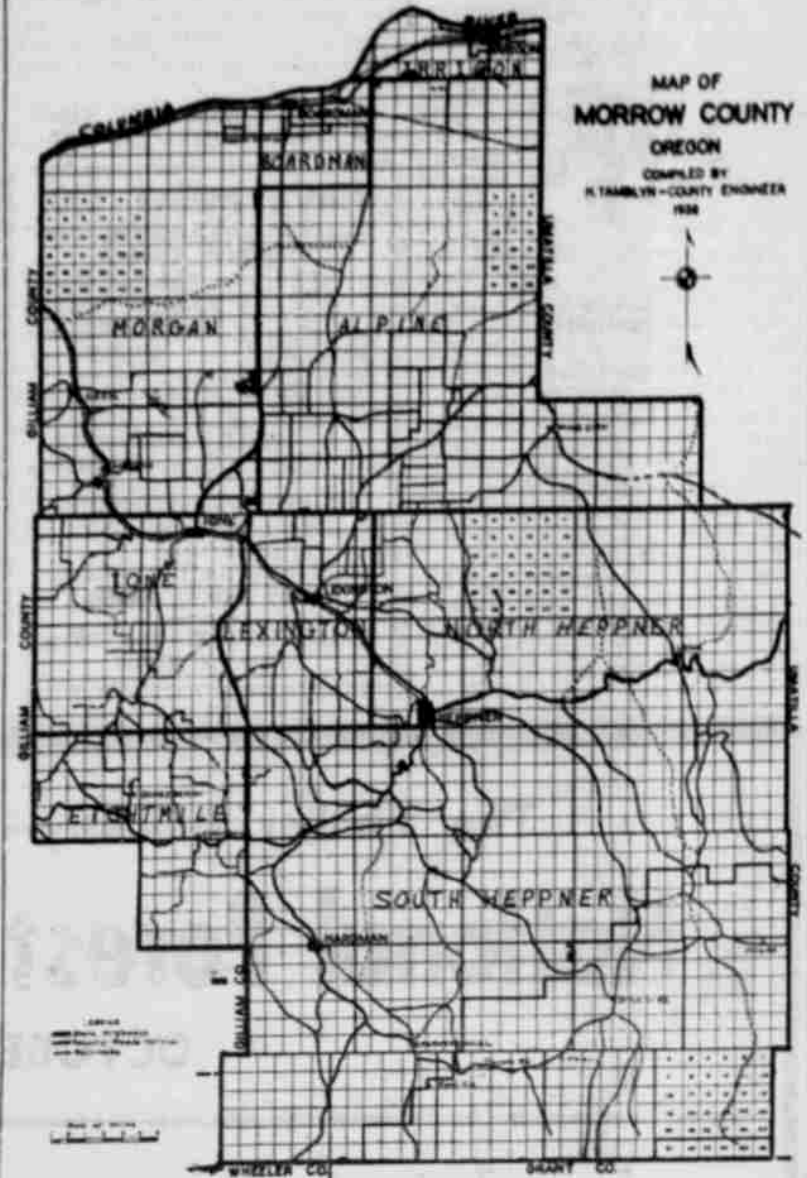

The effect of diuron on wheat varies with soils, uniformity of applications and environmental conditions. Growers should limit their first use to small areas.

It should not be used on loamy sand soils or sandy loams low in organic matter.

Further information on the use of Tordon or diuron may be found at the County Extension office or from your chemical dealer or applicator.

THIS MAP shows the nine areas of Morrow county from which community ASCS committees will be elected.

Committee Elections For ASCS Slated Soon

Election of Agricultural Stabilization and Conservation community committees will be held soon in Morrow county. Present committees will select a slate of nominees from eligible producers in each community, choosing those who are willing to serve as committeemen for the 1966 program year.

The duty of the elected community committeemen is to assist the county committee in administering the various federal farm programs within the county. All regular committeemen from each community will attend a convention to elect the county committee of three regular and two alternate committeemen.

It is an important duty as well as an obligation that all producers participate in the election of the best qualified men to represent them on the county committees. The county committee is responsible for administering all Federal farm programs in the best interests of the farmers and the public they serve.

The map of the county shown above is divided into nine communities. Producers living within each community elect committeemen of five men, three regular members and two alternates, to represent them during the following calendar year.

Each eligible voter will receive mailed ballots sometime before November 22, with instructions on voting. Further details may be obtained from the ASCS office in the Gilliam and Bisbee Bldg., Heppner.

Club Chooses Name

The Ione 4-H Horseflies club held a meeting at the home of Mrs. Wayne Hams on October 18. A yearly project was discussed, and it was decided that each member would make a nylon rope bridle. A discussion was also held to decide on a name for the club. The decision was on the Ione Horseflies club.

Debra McBeth, reporter

Among those coming from out-of-town to enjoy the annual Smorgasbord dinner at the Catholic parish hall Sunday, and to renew friendships here, were Mr. and Mrs. Phil Blakney and family of Prosser, Wn., former owners of Phil's Pharmacy.

How to get your money's worth in MOVING SERVICE

Don't be misled by low prices when "chopping" for a mover. Remember, at stake are the thousands of dollars you've invested in valued possessions. True economy lies in choosing the mover whose experience, skill and personalized care assure their genuine, full-time protection. . . . PLUS these important moving extras:

- Personalized "Pro-Planning"
- Sanitizing Vans & Equipment
- Latest Uni-Packing Methods
- Bette Malone Consultant Service

Call today for an accurate estimate without obligation.

Certified Study Lamps Get High Recommendations

By DONNA GEORGE

New study lamps on the market will help youngsters with homework. Take advantage of engineering research findings regarding recommended desk lighting.

Lamp shoppers have faced two main problems according to Bernice Strawn, Extension home management specialist, Oregon State University. One has been lack of moderately priced lamps which meet good lighting standards and another the need for consumers to be aware of the difference between a decorative and a study lamp.

A Better-Light-Better-Sight bureau certified lamp tag on each approved lamp will help parents recognize lamps which meet the Illuminating Engineering Society requirements for children's homework. Certified lamps will be sold under various trade names.

To obtain this tag each manufacturer must submit his lamp for a series of tests by an impartial laboratory. Later, random samples taken from dealers stocks are put through the same

tests to insure that quality is maintained. The tests include a measure of the amount of light provided at each of five points on the desk, checks on shadows, brightness of the exterior of the shade, stability and resistance to tipping. Of course, the lamp must also conform to specific requirements of the Underwriters Laboratories relating to electrical safety. The rigid requirements set up for this tag are based on extensive research by illuminating engineers. The lamp can be pretty and functional at the same time.

Millions of hours of homework are ahead for youngsters. As the days get shorter artificial light is needed for a longer time. Parents will do well to shop for study lamps with this special tag which also gives information on placement of the lamp on the desk to avoid shadows, size of bulb to use, and hints on types of wall and desk surfaces to prevent glare.

A Good Balance Gives Poise

And you're always in a good position when you have a Savings Account you can lean on!

When you save steadily, you can look to the future with confidence and poise, certain that you're headed straight . . . for the goals of your dreams.

By setting aside a definite amount to save regularly, you keep your money on the grow.

How far must you go to find a fence row like this?

Chances are you won't have to go far to find fence rows and other non-crop areas that were infested with weeds this past season. Perhaps now, right on your own farm, you have a tangle of dead weeds (and a fire hazard) like this one.

Unless, of course, you've been using Atrazine 80W—the highly efficient herbicide that can keep fence rows and other non-crop areas weed-free month after month with just one spray each year.

Compare this to other methods like mowing, disking, or repeated applications of short-term control materials and you'll find one-step weed control with Atrazine reduces costs, saves time, and gives you much better results.

Atrazine is effective against a wide range of annual and perennial broadleaf weeds and grasses.

Since seasonal rainfall will move Atrazine down into the weed root zone, where it works, application should be made now in order to get the best results in this area.

Atrazine also attacks weeds through foliage, so you can apply it shortly after weeds emerge, as well as before they break ground.

Remember. Now is the time to act if you want non-crop weed control through next season with one spray this fall. Order Atrazine from your dealer today.
