Mrs. Guy Ferguson accompanied her son Sid to Brush Prairie, Wash., where she will visit this week at the home of her son-in-law and daughter, Mr. and Mrs. Vern Moe.

Edwin Benthin had leg surgery last week at the Good Shepherd hospital in Hermiston. He is recuperating at home.

COSTS SO LITTLE

Good lighting makes such a difference in your life

Your biggest bargain in modern living

One of the most important benefits of rural electrification is the miracle of electric lights throughout rural America. It wasn't many years ago that only a few homes enjoyed electrical living... now we all take it as a matter of fact.

Did you ever consider how proper lighting can change your life? It makes your home safer, more comfortable and convenient. Lighting can even change the mood of any room... soft, indirect lighting encourages relaxation... comfortable lights encourage you to speed through household chores (and helps children study).

There's no trick to decorating with good lighting. Valances, for example, are ideal to emphasize the beauty of windows and drapes. They provide

good balanced lighting and bring out the colors of walls and furnishings. Cornices and wall-brackets can be effectively used to display planters, fireplaces and other interest areas.

Well placed lamps make reading and many tasks (such as sewing) easier. Floor lamps should be about 47 inches from the floor and 26 inches behind the reading material. It's usually best to have the light source slightly to one side... say 15

inches to the left or right. Be sure to have adequate bulbs; a minimum of 150 watts is desirable for reading.

Study is easier in a well lighted area

An adequate study area is important to your children's success in school. It need not be expensive. Chances are a little planning could change a dark corner into an ideal study center!

First, there should be adequate room for the student to spread his work in front of him. A table or desk is sufficient. The chair should be comfortable and encourage proper posture.

Lighting should be free from glare and shadows. A single lamp will do the job; place it on the side of the desk opposite the writing hand. The bottom of the shade should be 15 inches above the desk top; place the lamp about 12 inches from the front edge of the desk. Use at least a 150-watt bulb.

Two wall mounted lamps also give excellent lighting. Place them 15 inches above the desk and spaced 30 inches between the center of the shades. Use a minimum of 100-watts in each lamp.

Work better and safer, too
Proper lighting can help you work, too. For such tasks as ironing, wood-working, etc., you should use a minimum of 150-watts. The lighting fixture should be about 48 inches above the work. You'll find sewing easier

(and better) if light source is about 14 inches above the work. Don't strain your eyes... use at least a 150-watt bulb.

Many home accidents can be prevented with proper lighting. A small, inexpensive night light can save dangerous and painful falls. Outdoor lights serve the dual advantage of letting you work later and discouraging unwanted visitors.

Yet, electric lighting costs are low, thanks to rural electric power. It's your biggest bargain in better living!
