Note how one fall application of "Lorox" kept the area at left free of weeds. In the untreated area at right, purple mustard has already taken over.

## Keep weeds down—wheat yields up with Lorox\*

A single fall application of new Du Pont "Lorox" linuron weed killer eliminates competition of annual weeds at the early, critical stage of wheat growth. This makes the moisture, sunlight, and soil nutrients necessary for maximum yields available for the wheat...not the weeds. When you use "Lorox" you get:

- Increased yields—usually 10 bushels per acre or more.
- Control of a wide variety of weeds.
- Greater harvest profits.

Grower experience and research have found "Lorox" (introduced in 1967) to be highly effective in areas where rainfall is 10" or more annually. Order your supply of Du Pont "Lorox" from your local agricultural chemicals dealer today. \*"Lorox" is Du Pont's trademark for 50% linuron weed killer.

With any chemical, follow labeling instructions and warnings carefully.

**Non-cropland weed control**

Eliminate weeds in non-cropland farm areas such as field edges, fence rows, and farmyards easily, effectively, and economically with a single application of a Du Pont herbicide. Your local agricultural chemicals dealer can tell you which Du Pont weed killer is best suited for your specific non-cropland need—"Lorox" linuron or Hyvar® X bromacil weed killers.
