

INTERVALLEY DRILLING COMPANY

Water gushes from a well at the Darrell Padberg place.

"These new farm areas inevitably create villages and towns whose populations thrive from furnishing supplies to the farmer, marketing his crops, and from the industries which grow around these areas. The economy of seven important cities of the West had its base in irrigation—Denver, Salt Lake City, Phoenix, Spokane, Boise, El Paso, Fresno, and Yakima. Indeed these new centers of productivity send waves of economic improvement to the far borders like a pebble thrown into a pond. Through irrigation, man has been able to build a stable civilization in an area that might otherwise have been open only to intermittent exploitation."

—Second Hoover Commission, 1955.

With over 35 years of well drilling experience we are continuing to drill wells with the highest yield and engineering specifications.

Ground Water (Drilled Wells)

To Provide A Stable,
Flexible Agriculture
In Morrow County

An Assured Supply
Of Irrigation Water . . .

- Ends the threat of crop failures from drought.
- Ends reliance on a one-crop economy.
- Makes possible a shift from dry-farmed, surplus cereal crops to non-surplus irrigated crops.
- Preserves opportunities for family-sized farms.
- Provides a dependable feed base for effective utilization of livestock range resources.
- Creates new jobs in processing and nearby towns.

. . . All This Without
Adding To The
Farm Surplus
Problem!
