Impala's hidden persuaders:

- ① 350-cu.-in. engine  
A new more powerful standard 250-hp V8 makes the 1970 Impala move with all the more assurance. On good of regular gas.
- ② Anti-theft column lock  
A locking system is built right into the steering column. When you take your key with you, you lock not only your ignition but your steering wheel as well.
- ③ Aluminized exhaust system  
It simply means that your original muffler, tailpipe and exhaust are going to last longer than you'd probably expect them to. Fair enough?
- ④ Side guard beams  
They look like highway guard rails, and they're built into both sides of the car for extra protection in case of impact. Not too many cars have them.
- ⑤ Inner fenders  
Up inside every fender is another fender to protect against slush and mud and help keep your Impala looking young.
- ⑥ Flush and dry  
We build the car so that rain and wash water can run down through the inside of the rocker panels, then out. Air follows to do the drying.
- ⑦ Full Coil suspension  
Huge coil springs at all four wheels are four big reasons why a Chevrolet Impala rides smoother and quieter than a low-priced car has any right to.
