## Irrigon Improves Baseball Field

By FRANCES ROSE WILSON

**IRRIGON**—The Little League baseball field, within the recreation area of the Irrigon Park District, is beginning to shape up with recent installation of an irrigation pump for sprinkling from the river.

The area was leveled last fall and a number of Little League fathers have been busy endeavoring to get the area ready for seeding. Irrigation sprinkler pipes are now on the site and the ground ready for straw and seed. It is hoped it can be used by the boys this season. Work on the project is under the direction of Orville Buchanan, chairman of the Park Board.

### New Arrival

Mr. and Mrs. Jose Anthony Busto of Portland, announce the arrival of their first child, Robert Anthony Busto. He was born Feb. 3 in Portland, weight 7 lb., 9 oz. **Situation: Ground frozen tight all winter.  
No wheat or weed growth since the Nov. 21 snow.  
Wheat price outlook best in 4 years.**

## How to turn this winter into a weed control advantage when the weather opens up.

Just as soon as the weather breaks. That's the time to spray your wheat herbicide this year to beat the weeds, get your best yield, and cash in on the market.

This is because winter conditions have set the stage for your most profitable use of Igran® 80W herbicide this spring in an early spray.

Wheat is still small. Weeds are short, but cover fields like a dense carpet that can get a strangle-hold on your wheat in no time. And you have the moist soil and growing conditions this spring for weeds to do just that if you wait until wheat is tillering before you go after 'em.

With Igran, you can spray when the weather first breaks. By ground rig or fly it on. To get your problem weeds out before they get ahead of your wheat and stunt your yield.

Spray Igran any time. Before weeds are four inches high or three

inches in diameter. You can do this with Igran because it's safe to wheat. That's why it's the fall herbicide you can spray in the spring.

With liquid nitrogen to weed 'n feed in one pass, which is an excellent idea this spring because we have the favorable soil moisture for it. And the good wheat prices.

Why not use 2,4-D or MCPA?

Because this is the year you want your best yield. And you can't get it if you wait until wheat tillers, until everything is "just so" for 2,4-D or MCPA. Besides, they don't get many of the problem weeds Igran gets. Like speedwell, chickweed, henbit, gromwell, tarweed, purple mustard, dog fennel, fanweed, bedstraw and others.

In fact, Igran gives you control of most annual broadleaf weeds and grasses. Even gives partial control of cheatgrass, enough so you're able to make a crop.

And this is the year when every bushel counts, when every weed hurts.

So don't lose 6-8 bushels per acre by using phenoxy-type weed killers like 2,4-D and MCPA. That's what their injury to wheat costs you. Not to mention the yield lost because you had to wait to spray and then problem weeds escaped anyway.

Rotation? You can follow an Igran wheat crop in rotation with peas, lentils, fall barley, alfalfa, bluegrass or clover. No problem.

To sum up, this is the spring for Igran herbicide.

So, check fields for problem weeds early. Then knock 'em out with Igran just as soon as the weather opens up.
