Fishing

Troop 661 Has Fishin Trip

Troop 661 of the Heppner Boy Scouts left town on Saturday at 8 a.m., starting their fishing at the bridge on the edge of town, going all the way up to Cutsforth Park. Later, R. Ward, M. Piper, Scott McEwen, Bruce Young and Kenneth Goschnauer went for a rowboat ride on Lake Penland.

In the first smile: Erin Noble caught the largest fish, 15 in. Chris Wright, most fish (9). Bruce Young used most worms. Charlie Rawlins got the wettest. Ron Ward ruined the most equipment. Ron Young talked the most, said the least. Mark Piper had largest echo across Lake Penland. Herman Winter Jr. used the most lead weights. Russell Roark used the smallest hook. Jerry Baker had the biggest backlash.

For the next smile: Lee McCarl ate the most hot dogs. Scott McEwen burned the most marshmallows. Randy Cole & Brother carried the largest tackle box.

For the next smile: Dale Holland took the longest strides on the 5-mile hike. Terry Toll caught the smallest fish. Delbert Turner threw the most rocks in the creek.

After dining on hot dogs, pop and marshmallows in the afternoon, they returned home so the lads could get to the band carnival.

They were accompanied by Scoutmaster Del Piper and Assistant Scout master Herman Winter and Glen Ward and John Gochnauer of the committee.

Glen Ward, John Gochnauer and Ron Ward picked up dead fish around Lake Penland. Glen found a few fish still alive after a severe winter kill for lack of oxygen. There are still quite a few dead fish around the lake's shoreline.

SLEEPING AND BREATHING
By James L. Mack, M. D., President
Oregon Thoracic Society

Sleeping can be a hazardous activity. Especially for certain patients with severe lung disease who take sleeping pills.

The chief function of our lungs is to deliver oxygen and remove carbon dioxide from the blood. When we sleep, though, our breathing changes. In some people the oxygen level in our blood drops. Carbon dioxide increases. This tilt in the balance of gases in the blood happens to some people during sleep. But people with severe respiratory disease already have this imbalance of blood gases even when they are awake. Does sleeping cause an even greater tilt?

Until recently, no one had explored this question. But Dr. Benjamin Interiano of the University of Rochester Medical Center studied patients with severe lung disease as well as those with heart disease and others with obesity problems. The comparisons during sleep were surprising.

Dr. Interiano found that during sleep obese patients had drastic drops in oxygen levels, almost four times greater than that of normal subjects. Drops for patients with congestive heart failure were almost as great. Both could profit from oxygen therapy at night. But among patients with severe respiratory disease, changes in blood gas levels during sleep were not much different from normal subjects.

Nobody knows why, but Dr. Interiano speculates that an unknown protective mechanism prevents further imbalance of blood gases in respiratory patients while they are asleep. Unfortunately, the protective mechanism can be blocked by taking sleeping pills. Some effect from the pills causes a precipitous drop in oxygen levels and a rise in carbon dioxide. With such patients, taking the pills may cause serious complications.

To find out more about the lungs and how they work, contact your local tuberculosis and respiratory disease association. It's a matter of life and breath.

Irrigon

Water Pipe Line being Lain in Irrigon

Progress is being made on the irrigation water pipe line being laid west of Irrigon by Western Empires Inc. The pumping station is on the Columbia River on what was known as the Beigel place. It is now government owned and a game refuge.

A water trade agreement was made with the West Extension Irrigation Co. to supply water to farmers in the area in exchange for water supplied to Western Empires from the irrigation canal. An old wooden pipe line which was long overdue for replacement, will be eliminated.

While farmers in the area have suffered from a water shortage this spring, it is hoped that in the future there will be plenty of irrigation water for this area. The pipe line is scheduled to go into operation this week.

Dennis Logan is President of Western Empires, Inc. and has an office here.

G-T WANT ADS PAY

Home from Phoenix

Mr. and Mrs. Tom Wilson have returned to their home on Ordnance Rd. in Irrigon from Phoenix, Ariz. where they spent the winter months.

Jeannette Hodge spent 2 weeks visiting in Plains and Thompson Falls, Montana, returning to her home here last week.

Don Jorgensen has moved into a mobile home and has it established on 2nd St.

YOUTH RALLY

A number of young people and adults from Irrigon attended the Speed the Light Rally held in the Pendleton First Assembly of God Church Tuesday.

Plans were made Sunday for a Sunday School bus to take a group of youth to the Pat Boone Crusade, to be held at the Coliseum in Portland, Monday night.

CALL FOR NUTRITION

The Heppner Neighborhood Center would greatly appreciate those wishing trays or transportation to dinner on Wednesdays to call our office at 676-5873 before 1:30 p.m. each Wed. Volunteers are still needed to help with tray delivery, transportation and food preparation.

The Neighborhood Center wishes to thank Mr. Bob Jesperson and his students for the marvelous entertainment this past month.

Characteristics of New Orchard Grass Given

"LATAR" ORCHARDGRASS SEED AVAILABLE

PORTLAND.-- Almost a million pounds of the seed of 'Latar' orchardgrass -- a high-yielding variety that fits well into grass-legume mixtures for hay, pasture and silage -- is available for planting this season.

The Soil Conservation Service reports it is the first time that certified seed of the grass, introduced in this country from the Soviet Union in 1935 for testing, has been plentiful.

The SCS values the grass highly for conservation uses. Its high yield of fibrous roots improves soil tilth and increases water penetration and the amount of organic matter in the soil.

The grass has been shown to be well adapted to large areas of Oregon, Washington and Idaho. It is probably adapted, too, on irrigated lands in California, Nevada and Utah.

Principal features of 'Latar' orchardgrass are late heading, leafiness, and low fiber content. The percentage of digestible nutrients is high. Late maturity and good regrowth make the variety especially valuable in alfalfa-grass mixtures.

Much of the present certified seed supply was produced in Oregon's Willamette Valley, an area widely known for production of the seed of various grasses.

Favorable Characteristics Given For New Orchard Grass

For the the first time certified seed of 'Later' orchard grass -- a high-yielding variety that fits well into grass-legume mixtures for hay, pasture and silage -- is availabe in abundance.

'Latar', introduced into the United States from Russia in 1935, was selected for later maturity than other orchardgrasses. It is in prebloom stage when alfalfa is in the optimum hay stage, making it especially suited for alfalfa-grass hay mixtures.

The variety produces more digestible nutrients per acre than any of the common types of orchardgrass.

'Latar' may be used for hay or pasture under higher rainfall conditions or under irrigation. Under irrigation, it will persist in alfalfa grass stands with proper fertilizer and water management.

The Soil Conservation Service, which selected and tested the grass in its plant materials centers in cooperation with the state experiment stations of Idaho, Washington and Oregon, values 'Latar' highly for conservation uses. The high yield of fibrous roots improves soil tilth and increases water penetration and the amount of organic matter in the soil.

Adaptability of the variety has been proved in large areas of Washington, Oregon, and Idaho. It is well adapted to irrigated areas of California, Nevada and Utah.

Field trials of 'Latar' began in 1948. Over 100 field plantings were made in western states. Since 1958 farmers have established many fields.

The keys to successful plantings are good seedbeds, proper time and rate of seeding, careful irrigation, and proper fertilizing. Planting in alternate drill rows is recommended. Rates of seeding depend on the intended use. When the major use is for hay or silage, the grass should be about 30 percent of the crop. When it is for pasture, it should be about 50 percent.

Good management practices are essential when the grass is used for grazing.

Political campaigns teach us that not all people who stretch the facts are fishermen and golfers.

Public Notice

IN THE CIRCUIT COURT OF THE STATE OF OREGON FOR WASCO COUNTY

NOTICE OF SHERIFF'S SALE
No. 10986

Plaintiff, CECIL FRANKLIN HICKS,

vs

Defendant, MARJORIE EVELYN HICKS.

By virtue of an execution issued out of the above entitled court in the above entitled cause to me directed and dated March 21, 1973, upon a judgment rendered and entered in said court on the 16th day of March, 1965, in favor of Marjorie Evelyn Hicks, defendant, and against Cecil Franklin Hicks, plaintiff, for the sum of $50.00 per month child support and the further sum of $150.00 per month for five years, I certify that on the 9th day of April 1973, I levied on all the right, title and interest of the within named plaintiff in and to the following described real property situated in Morrow County, Oregon, to wit:

1. Lot 7, in Block 1, of North Boardman Addition, Boardman, Oregon.

2. Lot 2, in Block 4, Boardman (according to the duly recorded plat thereof) Section 9, Township 4 North, Range 25, East of the Willamette Meridian, Morrow County, Oregon.

3. Lot 4, in Block 15, Wills Addition to the City of Ione, County of Morrow, State of Oregon.

NOW, THEREFORE, by virtue of said execution and in compliance with the commands of said writ I will, on 22 May 1973 at 10 a.m., on the steps of the Courthouse, Heppner, Oregon, in Morrow County, State of Oregon, sell at public auction, subject to the redemption, to the highest bidder for cash in hand all the right, title and interest which the within named plaintiff had on the 16th day of March 1965, the date of the enrolling and docketing of the judgement herein, or since that date had in and to the above described property or any part thereof to satisfy said execution, interest, costs and accruing costs.

Dated this 18th day of April, 1973.
