Attention Farmers !!!
Last year some of our customers enjoyed a 5-10 bushel per acre increase with early spraying of Bronate over a late spraying of 24-D.
Bronate can be sprayed early while the weeds and grain are small. The grain only needs to have 3-4 leaves. Early spraying is the one that helps. Bronate can be sprayed in colder weather (any weather that your nozzles don't freeze).
Every day you delay in spraying your weeds, is costing you money. Kill them while they are small.
Act now, give us a call, 422-7254. We have a good stock of Bronate, Buctril, 24-D, and other chemicals.
