group that gardens should be fertilized at least one a year. The most common soil deficiencies are nitrogen, iron, potassium, magnesium, phosphorus, manganese and calcium. Deficiency usually shows up with yellowing of leaves, veining of leaf being darker or red or brown edging on the leaves. To treat nitrogen deficiency use ammonium sulfate and for iron deficiency use ferrous sulfate. These are especially needed in alkaline soil. Soil needs to be about 60° temperature for application. Soil analysis is not usually necessary for the home garden.
