## BATTERY EFFICIENCY

A battery is 100% efficient at 80° F. At 0° F, the same battery is only 40% efficient. But now the engine needs over twice as much power to turn it over as it did at 80° F. This is why weak batteries will fail in extreme cold or hot conditions.

STARTING POWER AVAILABLE FROM BATTERY vs. STARTING POWER REQUIRED BY ENGINE (UP TO 250%)

\*HOT STALL engine requirements can be up to 250% depending upon engine and underhood temperatures.

## ALIGNMENT

For Better Handling and Tire Mileage

Every car should at least have a thrust alignment. It relates all 4 wheels to a common center line to insure maximum tire life and a centered steering wheel.

Over 90% of all cars built today should have a 4 wheel alignment. Most front wheel drives and some rear wheel drives have rear wheel adjustments. We invite you to ask us about it.
