Preliminary plans are going forward for making the Pacific Northwest Land Products Show, to be held in Portland November 18-23, the biggest and most successful land show ever given west of the Rocky mountains. The management is getting in touch with commercial bodies and individual exhibitors of the territory to be represented and promises of liberal support are being received. Every district of the Northwest states has an opportunity in this "dirt show" for valuable exploitation.

Commercial bodies of the state are showing an interest in the collection of Oregon exhibits to be shown this winter at the land shows of the Middle West. In response to a call sent out by Manager Chapman of the Oregon Development League, many outside cities have been heard from, each promising to collect samples of the best products grown there this season and it seems a good collection is assured. No locality should allow itself to be unrepresented.

**Germes on the Farm.**  
Germes which cause milk to sour, bacteria which dispose of filth and aid in making fertile soil, and microbes which cause disease were shown through a powerful microscope magnifying 1,400,000 times, and the professor explained their action on food and soil. The bacteria which cause the souring of milk were shown, 15,000 of which placed in a line make just an inch.

**Making Natural Fruit Jams.**  
That natural fruit jams are far superior to cooked jams is the opinion of Prof. C. I. Lewis of the O. A. C. department of horticulture. He describes his method of preparing them as follows:  
Such fruits as red and black raspberries and strawberries make the most delicious uncooked jam, and one can enjoy a very palatable shortcake in the middle of the winter at very small expense. To prepare this jam, be sure first that your berries are sound. Throw out all soft, mouldy, or in any way decayed fruit. This is imperative. Then mix equal amounts of sugar and fruit, and crush the whole mixture carefully. Be sure that no berries are left whole.  
Before putting into the jars, some people stir the fruit occasionally for several days to be sure that the sugar and fruit become thoroughly mixed. After the fruit and sugar are so mixed, put them into fruit jars but do not seal them. The only covering that should be given them is a little paper to keep out dust. If the jars are sealed, the chances are that the fruit will spoil, but if left unsealed, it can be kept for some time. It can be kept for two years.  
Red and white currants treated this way make a delicious jam. This is somewhat different from that known as sun-dried jam. The sun-dried jam is cooked somewhat.
