

NOTICE.
To Whom It May Concern:
You will please take notice that Milo C. King has no authority to represent in any manner or take any contracts for the Unique Brick & Tile Company, and that his office as president and director has been declared vacant by the Board of Directors.
UNIQUE BRICK & TILE CO.,
By E. Gurney, Secretary.
Dated July 20, 1916.

Dobbins—I hear that your daughter married a struggling young man. Jobbins—Well, yes, he did struggle, but 'twas no use; he couldn't get away.

How Appendicitis Can be Prevented.
Gresham people should know that a few doses of simple buckthorn bark, glycerine, etc., as mixed in Adler-I-ka, often relieve or prevent appendicitis. This simple mixture removes such surprising foul matter that ONE SPOONFUL relieves almost ANY CASE constipation, sour stomach or gas. A short treatment helps chronic stomach trouble. Adler-I-ka has easiest and most thorough action of anything we ever sold. The Gresham Drug Co.—Adv.

Raspberries and Currants.
We are in the market for red raspberries and red currants. Any quantity. Home Packing Co., Mrs. H. J. Stocker, Gresham. Phone 148

LOCAL EVENTS OF INTEREST

John B. Hibbard, United States recruiting officer is in Gresham today on a quest for young men who are needed to fill the ranks of the third infantry, national guard. He is looking only for young men between the ages of 18 and 35 who are unattached and have no dependants. About 800 are needed for border service.

The Northwestern University club will hold its annual picnic Saturday, July 22, at the home of W. F. and George Honey, near Gresham. All former students of Northwestern and their family members are invited. The cars will leave First and Alder at 3 p. m. Dr. Sherman E. Wright, president, has extended an invitation to all former students whether enrolled with the club or not.

Those who are interested in the field day chorus, especially those who can sing, whether grangers or not, should meet at the Gresham grange hall next Sunday at 2:30 p. m. This will be the final rehearsal.

H. L. Park left yesterday for San Antonio, Texas, where he goes to install an Oregon semi-continuous kiln, for the Lone Star Clay Product Co., of that place. The kiln is patented by A. Klose of the Columbia Brick Works at Hogan. Mrs. Park went sometime ago to the same locality to visit relatives. Mr. Park will be away about six weeks.

The dance to be given at the Orient grange hall, by Multnomah grange, Saturday, July 22, has been postponed indefinitely.

Frank Frakes, who is employed in the mechanical drawing department of the O. W. R. & N. railroad, spent Tuesday night at the home of his parents, Mr. and Mrs. J. A. Frakes.

Miss Constance Gilman, of Portland, has been visiting with Miss Alice Roberts for the past week. Miss Gilman and Miss Roberts returned Tuesday night from a trip to Manzanita beach.

Miss Ruth Westfall, of Eugene, has been the guest of her friend, Miss Vaughn McCormick, the past week. Miss Westfall is on her way home after a trip through the Yellowstone National Park.

C. L. Crenshaw is doing the plumbing in the fine new house being built for Dick Maupin, at the place where the pipe line crosses the Sandy river.

Four crews of the Warren construction company, numbering about 50 men have rented houses in Gresham during their period of work here and are batching. The superintendents and engineers have rooms elsewhere. An office has been opened in the Dan Metzger building on Powell street.

Jones & Co., have been given the job of lowering the fountain and the work is in progress. It will stand 28 inches above the street surface after being lowered.

E. E. Chipman and William Childers, carriers on routes one and two, returned to work this morning after half a month's vacation. Mr. Chipman and wife spent their time mostly on the lower Columbia. Mr. Childers and family went to Wallowa county.

The great German physicist Helmholtz was the first to explain satisfactorily what keeps the sun hot. The sun is not burning; it is heated to the glowing point, like a piece of white hot iron. Helmholtz found that if we suppose the sun to be contracting by only 250 feet a year we would receive our present amount of heat. In other words, says the Popular Science Monthly, heat is being literally squeezed out of the sun. Professor Newcomb estimated that when the squeezing process has continued for about 7,000,000 years the sun will be one-half its present size.

Those who razed a building in Richmond, Kas., recently, expected a neat treat (apparently despite state prohibition) in the form of a bottle of wine known to have been placed in the corner stone when the structure was erected back in the early eighties. They found, to their dismay, that Kansas law, had long ago drunk the liquid, or, in plain English, that the cork had rotted out and the wine evaporated.

The newest way of removing sediment from bottles of wine before being sent to the market is effective and more economical than the older method. It consists of allowing the particles to settle in the neck of the bottle while in an inverted position and then freezing that part of the contents, whereupon it is easily blown off.

FAIR AMUSEMENT CONTRACT SIGNED

A great aggregation of amusements has been secured for the coming county fair, and there will be something of interest every minute every day during the five days of fair week.

A contract was signed yesterday with the Arnold Amusement company which guarantees a Ferris wheel, a merry-go-round, probably half a dozen shows, including a seven-in-one square top and somewhere around ten or a dozen concessions that will be scattered along the furrow.

Besides the above there will be a balloon ascension on the last three days of the fair, weather permitting and a high dive act every day. These features, in addition to the horse races and the pavilion dances will give the crowds the greatest line of amusements ever shown at the Gresham fair.

Bird Migration.

For twenty-five years the biological survey of the United States department of agriculture has been collecting data on bird migration. A bulletin by Wells W. Cooke, assistant biologist, states that the survey now has in its possession over 500,000 facts about the migratory habits of birds. In former bulletins certain conclusions regarding bird migration have been set forth, but never before have they been based on such a mass of facts. But in spite of the best efforts of observers, there is still much mystery about the habits of many birds. For instance, the mystery of what becomes of the chimney swift, one of the most abundant and best known birds of the eastern states, has never been cleared up. They migrate to the northern coast of the gulf of Mexico, and then disappear for five months. At one time it was believed that they spent the winter in the mud, but no trace of them can be found until March, when they again appear on the gulf coast and begin their northward journey.

Two theories account for the migration of birds, neither of which is much more than speculative. One is that during the preglacial period they spent all their time in the north, for then there was no severe winter weather. But when the ice began to creep down the winters became more inclement, driving the birds to southern fields. At first they went only for short periods, but as the ice pushed its way south they were forced to stay longer. The glacial period extended over many years and the habit of migrating became instinctive with the birds. At the height of the glacial period they remained in the tropics the year round. But when the ice receded and the present rotation of seasons began, they continued to migrate from force of habit. The other theory is that birds are naturally at home in the tropics, but that they became so abundant that in order to get sufficient food many of them were forced to seek new homes. They went northward following the glacial period and found virgin country. Here their young found ample sustenance, but when the snow covered the ground they were compelled to seek new feeding grounds, and they naturally returned to their old homes.

It is averred that the birds can stand winter weather very well, but that they must have food, and thus the climate has nothing to do with their migratory habits. No change of temperature in the south warns them that it is time to migrate. "It must be a force from within," says the bulletin, "a physiological change warning them of the approach of the breeding season," which starts them on their long flights northward. Over 100 species leave the United States every fall and spend the winter in Central and South America, some of them going as far as Argentina. It has been found that the bobolink winters in Brazil. Thousands of these birds make flights of from 500 to 700 miles across the Gulf of Mexico without a stop. The golden plover leaves the coast of Nova Scotia and flies 2,400 miles over the ocean to South America, often, in fair weather, without a stop. This is the longest uninterrupted flight known. The same birds have been known to fly from Alaska to Hawaii, a distance of 2,000 miles. They follow a course as direct as that of a ship, but no one knows what guides them.

The arctic fern nests as far north as it can find land. When its young have become strong enough to fly, the family migrates 11,000 miles to the antarctic regions. They may be seen off the Atlantic coast as far south as Long Island. It is estimated that these birds live in continuous daylight for about eight months in every year. It may be that they migrate in order to escape the long period of darkness, but this has never been ascertained. Most of our birds, however, fly to the northern coast of the Gulf of Mexico, and then, if they are in good health, they take the long flight across the gulf without a stop. Others go to Cuba and Jamaica and spend the winter feeding in the mountains. Thousands of birds are lost during the migrating season. They fly against lighthouses or other high objects, and are killed. The Washington monument has killed many migrators. Storms at sea overtake the birds far from a refuge, and many of them are drowned. Their endurance is remarkable, and it has been shown that the golden plover loses but two ounces of fat in a 2,400-mile flight.

The paper pulp shortage in foreign countries is causing many newspapers to suspend publication.

J. G. Montague, twenty, has been appointed a justice of the peace in Bandera, Texas.

The demand for bicycles in Siam is increasing.

DR. HESS' FLY CHASER

Will protect your cows from flies. Not as others do, for a few minutes, but lasts all day. We guarantee it to be better than any you have ever used or will refund your money.

Help Wanted!

The Gresham Fruit Growers' association is now in a position to employ about twenty-five more women and girl workers. All at piece work who make over \$1 in nine hours will receive the amount earned. Those failing to make this amount will be paid 11 1-9 cents per hour, or \$1 for nine hours. Apply at once at the factory, or call phone 871. 41

Postponed Dance on Saturday.

The big time dance which was advertised to be given in the open-air pavilion at Bull Run Park, but was postponed on account of the rain, will be held Saturday night, July 22. There will be good orchestra music, and a good time is assured to all.

The serious shortage of merchant vessels was again brought home to American manufacturers recently when some of them lost an order from the Argentine government amounting to \$1,500,000 because of their inability to state definitely when delivery of their goods could be made. The American manufacturers even tried to buy the needed vessels, but failed, so the order went to English manufacturers.

Probably at no time in its history has the port of Philadelphia harbored vessels of so many different nations. Some of the flags which floated over ships in the harbor recently were the British, Spanish, Italian, Argentine, Mexican, Russian, Norwegian, French, Austrian, Danish, Dutch, German, Brazilian, Belgian, Swedish, Greek, Japanese, Chilean, Cuban and the Uruguyan.

Barrooms are closed on Saturdays in Sweden because it is pay day, and the savings banks are open until midnight.
