The remains of irrigation systems that date back to prehistoric times when the valleys of Arizona were inhabited by highly civilized Indian tribes are still in existence. One of the most famous of these is on the state highway running from Prescott to the Grand canyon. Water is taken from what is known as "Montezuma's well," a curious natural well 440 feet deep, except in one spot, where no bottom has been reached at 500 feet. Lime in solution is carried by the water, and the sides of the ditch have been preserved by the petrification of the original earth. One ranch owner is using several thousand feet of these ditches after simply cleaning them out. A line of levels was run along the bottom of one of these old Indian ditches and showed the grade to be almost perfectly uniform at the rate of .01 feet each 100 feet.

The federated Malay States railways are reported to be running construction trains to the frontier.

So great is the demand for admission to Silliman institute in the Philippine islands that on the recent completion of a concrete two-story hospital for the mission, the old building was occupied as a dormitory.
