prayed to be delivered from being made a criminal of if he happened to leave one of these bottles of fruit juice uncorked and it fermented over night. He wanted to save the industries but wanted also to invoke Allah, the giver of all Good, to forgive him if a warm wind wafted the ferment germs into the open bottle and he became a criminal by harboring beverages with more than 1½ per cent of alcohol. He forgot that the Mohammedan god Allah is a non-wine drinking god, and the house had a good laugh and passed the resolution.

The fight over the Rogue river fisheries is on again. H. B. 180 provides in effect for doing away with seining on the Rogue river, in spite of the fact that at the last election the people voted to keep seines in operation. This bill does not exactly prohibit seines but makes the use of them impracticable. It is a bill to cripple the salmon industry.

## DEVELOPING EAGLE'S WINGS, HIS JOB

The air forces will be one of the most important branches of the national defense of any nation in the future. Therefore America seems particularly fortunate in its new commander, Maj. Gen. Charles T. Menoher, who is now in charge of the air forces of the United States. General Menoher made a great record.

War Svings Stamps save lives.

**Lessons of Inestimable Worth**

have been learned during the great World War.
One is that by practice of conservation and thrift, a nation or an individual can accomplish things which seemed in former days impossible.

There is perhaps no more striking proof of what can be accomplished by intelligent conservation than what has been done by America in the popular financing of the war.

Before the war there were less than three hundred thousand bond holders in the United States.

The American people were taught to practice Thrift, to eliminate waste and to save their money.

RESULT

Forty million bond holders today in the United States.
The National Thrift Achievement may well serve as an inspiration also to the individual.
