

"AIR BLAST" UNIVERSAL

The "Air Blast" Universal is more than an ordinary smoke consuming heater, however. It is a heat producer beyond compare. Thousands are in use and it is one of the biggest selling heaters we carry.

The air for the "Air Blasts," enters the stove through the intake at the front as indicated and passes entirely around the fire pot becoming superheated before it is discharged in sharp "air blasts" through the openings provided.

These two wonderful features of construction are what particularly distinguishes the "Air Blast" Universal and makes it the greatest fuel saver and most powerful combined coal and wood heater on the market.

It is a high class, well built stove which will last, giving economical service as long as it is in use.

We will be glad to demonstrate these features and the many others which are embodied in this stove, and urge you to visit our store when next in the vicinity, as actual demonstration will tell you more in ten minutes than we could tell you in a book. No obligation to buy.
