**The New Triplex Spring Overland**

*Keeping Up Its Reputation For  
Keeping Down The Up-keep!*

The burning question today is Gasoline. Obviously, the price will come down when more oil comes up. But that will be only a respite, not a cure.

The fact is, the time has arrived to increase the radius of motor mileage independent of the gas tank. The Overland designers reached that conclusion four years ago. That was not difficult. But the solution was. We will tell you why.

Anyone with a smattering of mechanical knowledge knows that to reduce the weight of a car is to reduce the cost of maintenance.

But, ordinarily, to reduce the weight of a car is to sacrifice the comfort of riding in it; and comfort weighs just as much as economy on a motor ride.

The problem was to combine lightweight economy with heavyweight comfort.

Expert engineering knowledge said it couldn't be done.

That was the tradition that a generation of automobile designers had set up.

And that is the tradition that the Overland designers have upset.

After four years of unrelenting effort, involving millions of dollars in experimentation, and millions more in readjusting the thousandfold activities of the Overland plants to the fundamental change in Overland plans, the most perplexing of automobile problems is solved.

Fleet as a cruiser in her light-alloy steels, and suspended securely on the new Triplex Spring—

The Overland is literally a revelation in comfort and a revolution in economy!

You don't know what either comfort or economy is in a lightweight car, till you have ridden in the new Suspension Triplex Spring Overland!

For this is the first time in the history of motoring that economy and comfort have taken the road together!

The Overland Sedan has an average of 25 miles in 97 cities. That is the reason and this is the season for an Overland Sedan.
