## Take an Inventory of Your Land!

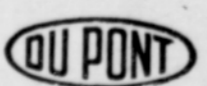

ARE you making as much money as you can out of your farm? Just stop and do a little figuring for a moment. This table will make figuring easier. Fill in the proper figures:

	ACRES	PROFIT	LOSS
1. Under cultivation.....			
2. Stump and swamp land.....			
3. This same idle land (2) cleared producing profit per acre equal to (1).....			
4. Present total profit (1-2).....			
5. Possible total profit (1+3).....			

Is it not just plain good business to make idle stump and swamp land into producing land—to shift it from the loss column to the profit column?

That explains the great land-clearing movement that has swept the country and is still growing.

The dynamite method is the usual method today for stump and boulder blasting,—ditching and tree planting as well. Because reliable, efficient, low-freezing and economical, most farmers use for land clearing
