ments, almost entirely completed at the present time, which will add greatly to the attractiveness and convenience of her restaurant and confectionery, and which will increase the seating capacity at her tables from 25 to 40 and add to the ease of serving.

These improvements include the installation of a large dishwashing sink with hot and cold water in the basement and a roomy dumb waiter for carrying the dishes and cookery up and down. This gives more room on the main floor and makes it possible to set additional tables. New, low-backed dining chairs have been put in at all tables and a new coffee urn will be ready for use in a day or two. A new gas range in the short order kitchen and new steam trays have been installed, and new sanitary

candy jars in the confectionery department.

Among the new additions in the main kitchen in the basement are two roomy gas ovens which greatly increase the capacity for baking and roasting. An additional Gasco pipeless furnace will insure comfort in the diningroom in the coldest weather.

These are but a few of the improvements which have been going on for the past few months, which have made this establishment one of the cleanest and most attractive public eating houses to be found. The carpenter work has been in the hands of Frank C. Jones.
