Bees Need Preparation for Winter.

Plenty of young workers, abundant stores, and good protection are needed for successful wintering of bees, says H. A. Scullen, practical bee man of the Oregon Experiment station staff. At least 15,000 young bees, and 30 or 40 pounds of honey are required. Winter packing cases will protect the hives from extremes of temperature and the hives should be so located that their openings are not turned toward the prevailing winds. The extension service at the college will supply detailed instructions.
