NEW DODGE PARK GRADE TO ELIMINATE STEEP HILL

A large force of men and teams is at work remaking the Crissey grade from the top of the hill to the Sandy river level. The new grade begins on the Richards hill and is being hewn out of the side of a bluff. It will be scenic and remarkably beautiful when completed and will obviate the long steep grade through the Crissey property which has been in use for many years, and will make an easy approach to Bull Run and the head works of the Portland water supply. The city of Portland and Clackamas county are cooperating in the cost of the project, the former bearing two-thirds of the expense. One of the spans from the old Burnside bridge in Portland will be placed across the Sandy near the present bridge and will connect with the new road. Six months will be needed to complete the work of grading.

Women in Employment.

Here are some interesting things about woman employment in America, just found out by the women's bureau of the department of labor: There are 3,500,000 women wage-earners in this country. Of these, 42 per cent or 3,570,000 are under 25 years old. Of all the men employed in America, only 22 per cent are under 25. Which probably indicates, first, that men don't go to work as early as women, but seek higher education in large numbers; second, that women quit working entirely in many or most cases when they get married, while marriage, for a man, merely means a beginning of serious work. It will also surprise most people to learn

that the largest employment-group, among women workers, is still domestic service. But the actual number of women so employed has decreased since 1910. If the girl-workers were suddenly taken out of the offices and factories, chaos would result. But the statistics show that they get out themselves, one by one, in the normal way—marriage.—Oregon Grange Bulletin.
