Do away with vibration—cut friction to a fraction—abolish carbon troubles and valve grinding—and you add years to the life of your car.

In the poppet-valve-engined car, it is the pounding of cams against push-rods, the contact of push-rods on rocker-arms, the recoil of valves under coiled springs that cause vibration.

In the sleeve-valve-engined Willys-Knight there is no pounding of metal upon metal. The Knight engine is simplicity itself. It consists of but two metal sleeves operating with a gliding motion. No vibration. No friction. Simply two single sleeves working smoothly and silently, up and down, one within the other, in a constant film of oil—and that is all!

Carbon, too, shortens the life of the poppet-valve engine. The only remedy is valve-grinding. And this assembling-and-tearing-down process weakens the engine every time it is performed.

Carbon troubles cannot exist—there is no valve-grinding with the sleeve-valve-engined Willys-Knight. The unique principle of this patented engine provides that carbon only serves to seal compression and prevent power-waste. Instead of weakening, it literally gives this car added years of life and usefulness. Instead of harming, as it does all other engines, it actually helps the Knight engine to perform!

The new WILLYS FINANCE PLAN means less money down, lower monthly payments; and the lowest credit-cost in the industry.
