Turn the key! and your Buick is Double-Locked

No lock could be safer! One turn of the key locks both ignition and steering wheel. But merely turning off the ignition does not lock the wheel. You may shut off the engine and coast, if you like, and still have your car under perfect control.

And no lock could be more convenient! It is illuminated and located within easy reach, where the steering column meets the dash.

The Buick double-lock is an exclusive Buick feature—one of many important refinements which characterize Buick for 1928.

The simple secret of Ventilated heat

Warm air rises, cold air descends. So Montag arranges to take the colder, lower layers of air OFF the floor. Air circulation results.

Forcing a volume of air through a small opening creates a draft. A draft is uncomfortable, and even unhealthy, so Montag provides extra large openings to allow slow movement of the air in large volume, affording warmth without the annoyance of drafts.

Moistened, or humidified air is more comfortable than dry air of the same temperature. From over 40 years knowledge of this climate, Montag knows exactly how much moisture must be added to the warm air, and provides it.
