There was a fine attendance of students and nearly all members of the faculty were present. Delicious refreshments were served. A musical number which was greatly appreciated was given by Filipino boys on stringed instruments.

The local W. C. T. U. is preparing an unusually interesting program for its meeting to be held Thursday afternoon at 2:30 at the home of Mrs. M. J. Allehouse. A round table Armistice Day peace discussion will be a feature of the afternoon. A vocal solo will be rendered by Mrs. Lois Else Halldorsson of Portland, and a piano solo by Miss Dorothy Cooper. The large frame house recently purchased by D. C. Ely and moved from its location on Second street near Main, to Hood avenue between Fourth and Fifth, is now in place and makes a good appearance, due to the care with which it was moved. The Gresham box factory, of which P. F. Felt is the manager, has been enlarged to seven times its former capacity and new machinery is being installed to take care of the increasing trade in berry hallowcks and boxes. A veneering machine which saws up a log five feet in length and 52 inches in diameter has been installed. This machine not only cuts the veneer for the hallowcks, but turns out the box shuck complete. The machine formerly in use here would take but 25-inch length material 24 inches in diameter. Mr. Felt says he considers that his factory has passed beyond the experimental stage and for the coming year he has set the goal at 200,000 crates, as against 38,000 crates made last year.

AN APPEAL to "Coal" Reasoning

As a coal consumer, you, Mr. Reader, have no doubt been dissatisfied from year to year, with the objectionable features of some coals. If it wasn't clinkers, it was sticky, stringy soot, and if it wasn't one or both, you found it difficult if not impossible to hold or maintain a fire in your heater; in fact, you were literally "burning up money."

Anthracite coal is admittedly the best of fuels, but, because of its prohibitive price it is out of reach for the majority of us—but, here is a coal, which has practically all of the characteristics of Anthracite coal. UTAH-GRAND COAL is low in volatiles, the soot producing elements. UTAH-GRAND COAL makes no stringy soot. UTAH-GRAND COAL has no pyrites of iron or gypsum, and therefore, does not injure your grates, and makes no clinkers. UTAH-GRAND COAL is hard, therefore, lasts longer and is easily controlled. UTAH-GRAND COAL burns up to a clean fluffy ash. In other words, at a bituminous price, you may secure UTAH-GRAND COAL, with most of the Anthracite characteristics. You have tried them all for years, seeking the qualities we claim. We only ask you to try it and be convinced, just as thousands of others are now enthusiastically proclaiming UTAH-GRAND "The Best Coal on the Market."

Demand UTAH-GRAND COAL. It is labeled for your protection.
