Someone thoughtfully provided ice cream and wafers which made the evening a most enjoyable affair. Two other charivari groups arrived during the evening to assist in the noise.

ATTENTION CALLED TO FIREWORKS DANGER

The danger to children because of fireworks, and the need of special care on the part of parents to protect them are pointed out in the following letter issued by the Oregon state board of health:

"The parents of three small children killed by fireworks last year recently appeared before the Rochester, N. Y., common council and urged the adoption of an ordinance to prohibit the sale and discharge of fireworks within the city with the exception of the display of set pieces at community celebrations." The ordinance requested by these bereaved parents was passed by the council—too late so far as they were concerned—but their action may be the means of saving other children.

"Since it is probable that the authorities of most communities in Oregon will still allow the sale and use of dangerous fireworks on Independence Day—in some cities have been allowed it for days in advance in defiance of present laws—it becomes the duty of the state department of health to point out to parents some of the more important causes of Fourth of July accidents and means by which they can safeguard their youngsters.

"The type of fireworks which is set off by grinding under the heel or by pounding and which is known by various fanciful names such as 'nigger chasers,' 'spit devil,' 'devil-on-the-walk,' etc., contains phosphorus, a deadly poison. It is not a rare thing for a young child, mistaking this material for candy, to put some of it in his mouth, usually with a fatal result. Or children may become poisoned by handling the material and subsequently putting their fingers in their mouths. If an accident of this kind happens, give the victim liquid petrolatum or mineral oil and call a doctor immediately.

"Severe burns are always dangerous. On the Fourth don't dress your children in fluff light material which will easily catch fire. Even sparklers, which ordinarily are harmless, have been reported as setting fire to light muslin dresses.

"Tetanus, or lockjaw, is perhaps the danger most to be feared as a result of Fourth of July accidents. The lockjaw germ will only grow in the absence of oxygen. Its habitat is the soil, particularly manured earth. Deep wounds in the soft flesh, such as are caused by blank cartridge wads, are particularly dangerous as the wad usually carries surface dirt to the deeper tissues which gives this germ the best possible condition for growth and the development of its poisons. In such cases call your doctor at once and let him give tetanus antitoxin. If given early enough this will prevent lockjaw; if given after symptoms develop its action is far less positive. Lockjaw once fully developed is commonly fatal.

"Have we overestimated Fourth of July dangers? Last year after the holiday, editorial comment was practically unanimous for regulated celebrations. But memories are short, a year is a long time, and it
