Put Your Surplus Straw Back On Your Land

The straw that you burn or use wastefully can be put back on your land with big profit. Properly spread, straw acts as a mulch on fall seeded crops. It prevents soil blowing, prevents winter killing, prevents winter sleet from smothering plants—and when turned under it has almost as much fertilizing value as manure.

Spread your straw—come in and get a John Deere Spreader with Straw Spreading attachment. Get double use and double profit from it. The John Deere Spreader with a Straw Spreading Attachment spreads straw and spreads

manure—does a fine, even job in either case.

One man operates the John Deere either when spreading straw or manure. After the machine is loaded, get on the seat, put the machine in gear, start the tractor or tractor, set the machine for heavy or light spreading as conditions require—that's all.

To take off the Straw Spreading Attachment for manure spreading is only a 30-minute job for one man. The change is quickly and easily made.

Don't attempt to get along another year without this profitable equipment.

Come in and let us show you an outfit that will pay for itself in a short time.
