

THE HERMISTON HERALD

Published every Saturday at Hermiston, Umatilla County, Oregon, in the heart of Eastern Oregon's great irrigated alfalfa fields, by the Herald Publishing Company.

M. C. Athey, Editor

Entered as second-class matter, December 5, 1908, at the postoffice at Hermiston, Oregon.

Subscription Rates: One Year, \$1.50; Six Months, 75c

VALEDICTORY

We have ceased our labors on the Hermiston Herald, and this issue comes out under new management. In retiring from the newspaper arena in Hermiston, we wish to say a last farewell word to our many friends and patrons, and this in effect is that we have never worked among a more pleasant and intelligent class of business men and farmers than reside on this beautiful and bountiful Umatilla project.

In saying adieu we do so with full knowledge that ever there will be the recurrence in after years of pleasing recollections of unstinted patronage and loyalty by the people hereabouts during our three years' publication of the Herald.

In turning over the reins of government of the paper to M. C. Athey, our successor in the editorial chair, we do so with a keen sense of delight, for we know from him the people will receive a clean, wholesome and newsy paper. And now, in laying down our editorial pen, which was never very vitriolic, we ask that the same good will and patronage accorded to us in the past be continued and extended to the new editor and proprietor.

M. D. O'CONNELL

FOREWORD

Believing with unflinching faith in irrigation and the reclaiming of arid lands that make our country the garden spot of old mother earth, we have identified ourselves with the Herald, and will continue to publish this well established, enterprising paper with all the fervor and enthusiasm our humble pen and mechanical ability will permit.

In making our editorial bow, we do not wish to make a great many promises. We merely wish to state that, believing with our whole heart and soul in the great undeveloped resources of Eastern Oregon, and our own immediate vicinity, its possibilities only limited by the endeavor of its enterprising people, it will be our untiring effort to acclaim to the world our wonderful country, and fight for its rights and future development.

"By their works ye shall know them."

Hoop 'er up, Boardman, Hermiston is with you tooth and nail on the John Day Irrigation project, and in the language of Patrick Henry or somebody else, we've forgotten who, "damned be he who first cries quits."

In this day and age, a good education is one of the requisites of a successful business man or woman. The business world is crying for college graduates, and the supply is inadequate to meet the demand. Let's give Oregon boys and girls the best chance possible. Vote for the Higher Educational Relief Measure, on the ballot No. 310 yes.

Some big duffer back east made a speech a while back, and in it he said that a man who mentioned "efficiency" more than nine times in one conversation with him was the bunk. Now we know what's the matter with the American Express company.

The inventor of a new spark plug for internal combustion engines claims it shoots a ribbon of flame instead of a round thread of fire.

FRUIT PLANS FOR BEGINNERS

Farmers' Bulletin 1001 Contains Information in Concise Form That Will Assist.

(Prepared by the United States Department of Agriculture.)

Well-ripened sound fruit is healthful. It is also a valuable food. It should form a part of every meal, fresh when possible, or dried, canned, or otherwise preserved.

Home-grown fruit is desirable—Because it reaches the family fresh and in the best possible condition.

Because the family has fruit of which it would often be deprived if it had to be purchased.

Because, if the proper varieties be selected, a continuous supply of fruit of superior quality may be secured, regardless of market prices.

Because any surplus may be sold without difficulty, or may be canned.

Peach Trees Heeled In—They May Be Held in Good Condition in This Manner for Some Time, but Should Be Planted as Soon as Possible.

evaporated, or otherwise conserved for use when fresh fruit is not available.

Because the care of the home fruit garden, provides for spare time congenial and profitable occupation which is in reality recreation for those who enjoy seeing things grow.

Information that will be of practical help to the beginner in fruit growing is furnished in concise form in Farmers' Bulletin 1001, "Growing Fruit for Home Use," recently issued by the United States department of agriculture.

This bulletin, which will be sent free on request, deals with the widely grown temperate-climate fruits, such as the apple, pear, peach, and plum. Lists of desirable varieties of these fruits are given for the different parts of the country.

Because of the number of fruits considered and the territory covered, cultural directions are necessarily brief, but they cover the most important general points.

OUTCOME OF APPLE ORCHARD

External Factors Play Important and Complex Part Upon Mature Trees Which Are Bearing.

The external factors in orchard growth play an important and complex part upon mature apple trees which are bearing heavily. Although the trees may make a greater growth in a wet season than in a very dry one, other competing factors may enter to a sufficient degree to practically annul this fact. A change in cultural or fertilizer methods may also greatly modify the normal growth of the trees. These points must be taken into consideration when summing up the probable outcome of the apple orchard.

KEEP ALL PROFITABLE HENS

Close Attention and Study Must Be Given to Each Individual Fowl—Some Are Layers.

Keep all hens as long as they are profitable. This calls for close attention and the study of each individual hen, but it is work that pays. The man who turns off every hen that reaches the age of two years is pretty sure to sacrifice some of his best layers.

The clothing of a growing boy refuses to grow with him. Occasionally a man rises from nothing to something worse.

There are more thorns than roses on the path that leads to a woman's heart.

When a man is hungry words of sympathy are not calculated to fill an empty void.

You can't pull the tread off a Thermoid Tire

Eight features that make Thermoid Tires extra strong

1. Thermoid Tires, in many sizes, contain one more ply of fabric than is put in standard tires. For example: 3 1/2 inch tires are built with 5 plies of fabric, and 4 1/2 inch sizes with 7 plies.
2. The fabric in Thermoid Tires is woven from 17 1/2 ounce long staple Sea Island Cotton.
3. Between each layer of fabric is a special blend of Crolide Compound rubber.
4. The cushion is also made of a special blend of Crolide Compound rubber.
5. The breaker strip is made of specially woven fabric.
6. Between the cushion and

the tread there is a different percentage of Crolide.

7. The tread is of Crolide Compound rubber—extra thick, and because of Crolide, tough and resilient.

8. The tread is held firmly in place by a special Thermoid interlocking arrangement of the plies of fabric.

We claim, frankly, this tire will give you more mileage for less money than you've heretofore obtained. The Thermoid guarantee below offers you the opportunity to prove or disprove this claim for yourself without risk.

6000 miles guaranteed (Ford sizes 7500).

Satin Egg Shell Finish

RECONSTRUCTION!

Now, while the world is doing its "house cleaning," is a good time to begin a "reconstruction period" at home.

Whichever room you start with you will find need for B-H Satin Egg Shell Finish. Although intended for walls and ceilings it makes a beautiful egg-shell enamel on woodwork too. The Kitchen—Library—Bedroom—Hallway or Bath can be made brighter, more attractive and easier to keep clean by a coat of B-H Satin Egg Shell finish—any one of twelve shades.

Be sure to think of Bass-Hueter when considering a painting job—whether a room or an entire house—inside or out.

Let us assist you in the proper choice of materials!
