Few Old Wells Found on the Modern Farm

The old well, always concealed except as one might peer down its dusky depths and speculate vainly as to the mysteries it might conceal, imagination heightened by tales of murders committed and the victims thrown into the abandoned hole, is now rarely marked by curb and more rarely by sweep, says a writer in the Springfield Republican.

The invention of the bucket and chain, by which one turned a crank and caused the water to flow forth in unbroken stream, ended the well-sweep's day. Then came the pump, and the pump came to have its place indoors. And others laid water pipes to springs, and pressure obviated the use of pumps with them. And the town crew, and arrived the day of the water system, and even the semi-detached farmhouse "connected up." So at last, with all these encroaching changes, the old well became covered with thick stone slabs, and so most of them remain, safely concealed from view, unless, still in use, the welfare even of the cattle requires a renovation, and it is somehow safely accomplished.

COLE'S ORIGINAL HOT BLAST HEATERS

The Three Basic Principles in the Construction of Cole's Original Hot Blast Heaters

First. The patented Air Tight construction giving perfect control over the fire, and preventing the escape up the chimney of heat and unburned fuel gases, giving perfect combustion of all the fuel.

Second. The all-steel sensitive radiating surface which radiates all the heat into the room and gives a sizzling heat.

Third. The patented Top Hot Blast Draft which oxidizes and turns into heat the valuable gas, half of the fuel, allowing nothing to waste.

These three basic principles entering into all Cole's Hot Blast Heaters make them world famous for fuel economy and perfect control and radiation of heat.

We now have a complete stock of Cole's Heaters and if you are in the market for a heater it will be to your advantage to investigate the merits of the Cole's Hot Blast before buying a cheap or Heater.
