

POULTRY HOUSE IDEAS

The poor lumber dealer got an awful wallop not long ago. And this is the way it happened. Chicken houses were being built at least twelve high with a wonderful arrangement of sash and ventilators way up there so high that they might have served as "lookouts" in the time of invasion.

Since chickens are not built on the same plan as giraffes, folks began to realize that all that superstructure was unnecessary. Now they build their poultry houses not more than eight feet high at the highest place. They have found that the chickens can keep warmer and with a simple ventilating arrangement they do much better.

But it doesn't take near as much lumber to build this new style house, and that is why we feel discouraged, but it will brighten us up a great deal if you will build for 300 hens instead of for the 200 that you had thought of.

You can do it for the same money

We'll sell the same amount of lumber and you will have increased your capacity fifty per cent without additional expense. You'll be happy and so will we.
