

The Results of Saving

Are to make the individual independent.
Whether we save or waste depends largely on fixed habits, and one of the beneficial results of saving is that it develops a sense of values not likely to belong to the wasteful individual.
If you have never had a savings account in a bank you'll be surprised to learn how interesting a matter it is to build an account. Start with as little as a dollar and develop the account and the habit of thrift together.

the land settlement office, making a total of 13091 such inquiries since the first of January of this year.

Out of the 1203 signed questionnaires returned during the last six months, regarding the homeseekers' intentions, financial standing and other facts, 1131 indicated their intention of coming to Oregon before many months elapse. Out of these 128 were received in June. These signed statements indicated that the newcomers would have capital for investment aggregating \$2,594,100. June prospects anticipate an investment of at least \$294,000.

During the six months just closed 340 families have been reported to have settled in various parts of Oregon, coming from outside the state. Many of these new residents are co-operating heartily in encouraging their former neighbors in other states to join them in Oregon. In this way the number of new settlers and their investments are being constantly increased. These 340 families of whom the department has a record have brought investments of approximately \$1,193,000.

Since the first of the year over 2000 people have called at the land settlement office in Portland to confer concerning the choice of locations on Oregon farms. The records indicate that July and August will bring a greater number than has yet arrived.

Miles of Thread Used

Statistics show that every inch of cloth contains about 25 threads running downward and the same number running across it, so that a square yard is composed of 1,800 threads, each a yard in length.

The average suit or costume needs four square yards of cloth, so that every man or woman wears something like four miles of wool.

Allowing two sets of clothes a year, we find that each of us uses 400 miles of wool in fifty years.

When we come to linen or cotton goods, with 30 or 100 threads each way to the inch, the total length of threads becomes appalling. A single handkerchief may contain 2,400 strands, each 15 inches long, so that 1,000 yards of cotton thread are required to make it.

A shirt represents about three miles of thread.

Xerxes' Mighty Army

Xerxes, the Persian king, used an odd method to count his soldiers before the battle of Thermopylae in 480 B. C. He had the greatest army of invasion that ever had been seen upon the earth when he moved against the Greeks. He wanted to know how many fighting men there were, so he had 10,000 of them counted and they were bunched into as dense a mass as possible and a wall was built around the space they occupied. Then the whole army entered the enclosure in detachments so that the number of times it was filled, multiplied by 10,000, was approximately the total of the invading forces. This figure, according to Herodotus, was 1,700,000 foot soldiers and 80,000 cavalry. With attendants and the sailors and soldiers of the fleet added, he brought the total up to 2,317,000.

Why Salesmen Age

A Kansas City woman bought a compass for a Christmas gift for her husband. Next morning she took it back to the store, complaining that there was something the matter with it. "You see," she explained, "it points in the same direction all the time, no matter which way you turn it." "It ought to do that, madam," said the salesman. "It should point to the north all the time."

"But I don't want that kind of a compass. I want one that will point east when we are driving east and west when"—According to Capper's Weekly, the salesman was reported late in the day to be "doing as well as could be expected."

Odd Things Done at Fires

Excitable persons who at a fire have thrown valuable mirrors out the window and carried out pillows may find condolence in the action of an Australian who braved the danger of a blaze in a saloon to throw several dozens bottles of liquor out the window onto a paved highway. More recently a nearby blacksmith shop burned, and the same fire hero ran to the shop and emerged with a heavy object in his arms. "I had to save it," he said. "It was the poor man's living." Then he dropped an anvil on the ground.

FARM REMINDERS

Oregon farmers are not behind their brethren in other parts of the United States in the use of electricity on their farms and in their farm homes, reports the experiment station. In Oregon horticulture electricity has been used in dehydration of prunes and nuts. The design of dehydrators has been vastly improved in the last few years and the capacity approximately doubled by the recirculation system.

Irrigation of prunes in Douglas county conducted by Huron Clough of Canyonville obtained on 20 acres an increase estimated at \$1000 in two seasons and \$500 in a third. The prunes were larger in size and brought a higher price. A number of prune growers in the same district are reported as having succeeded with irrigation.

"Clover mildew has come to Oregon to stay," says H. P. Barrs, plant pathologist of the Oregon experiment station. "Infections in southern and eastern Oregon, especially in the irrigated sections have caused many inquiries for the clover mildew treatment. Application of dusting

Mrs. Roy Lash has taken over the management of the Umatilla hotel.

Mrs. Frank James returned Wednesday from the valley, after spending two weeks there.

DAY AT STANFIELD ENJOYED

(Continued from page one)

violin number and encore.
Frank Correa of Echo was well received in his rendition of a patriotic reading "I Am America." A costume dance by Uncle Sam Jr. and Miss Columbia Jr. was the next number on the program and was followed by a burlesque by J. B. Pace of Stanfield who impersonated a feminine candidate for governor. Mr. Pace's offering brought a hearty round of applause from the big crowd.

The morning's program was concluded by the singing of "The Star Spangled Banner" by the audience. Following the picnic dinner the program consisted of talks by Mr. Madden and Sheriff Cookingham and a musical monologue by Lee Bartholomew, former Stanfield resident.

Settlement of the territory that later became the United States of America was prompted by the zealous desire of those who sought religious and civil freedom. Mr. Cookingham said in his address. The factors that led to the movement to the western hemisphere were related from history's pages by the speaker.

The development of the country during the 151 years since the first Fourth of July has been more rapid than was ever dreamed, the speaker said. Progress has been made in vast strides. Eternal vigilance is necessary on the part of citizens today that the heritage from the forefathers may be kept untarnished, he warned, and law must be upheld if liberty is to be enjoyed.

Mr. Bartholomew delighted the audience with his numbers and was forced to respond with several encores.

The crowd was estimated to have been between 750 and 1000 for the day. Some visitors were present for only part of the day, but more than 500 were on the grounds all of the time, according to the estimates made.

CREAM POOL PLANS COMPLETED

(Continued from page one)

in a big way."

S. R. Cooper of Stanfield also spoke in favor of the pool, and several Hermiston district farmers went on record in favor of early action.

"You never saw a dairy section that got very far without organized effort, and in a year from now you men probably will be just about where you are now if you don't take this opportunity to organize," was one bit of advice given by Mr. Hurd.

County Agent Holt advised that the organization be placed on a correct basis to prevent failure.

NEW SETTLERS CONTINUE

COMING TO OREGON FARMS

Land Settlement Department Has Record of 74 New Families During June.

A steady gain in Oregon's farm population is being registered month by month, according to the records of the land settlement department of the Portland and Oregon State Chambers of Commerce. June has proved no exception to the rule and has brought reports of 74 new families settling on Oregon farms.

During the month of June 1584 letters and inquiries concerning Oregon farm lands were received by

gulfur will kill the mildew. In most cases this is not necessary until after the first mowing.

Electric brooders have been found satisfactory if operated properly. It cost usually more than oil for brooding but eliminates most of the labor and fire hazard. Results of the use of electricity for increased egg production and for breeding have been published by the state college experiment station poultry department.
