

STATE FAIR TO BE SEPTEMBER 22-28

LOCAL MEMBERS TO EXHIBIT RESULTS OF SUMMER'S WORK

Each County to Send Judging Team From one of 4-H Clubs to be Represented at Salem.

As the date for the State Fair draws near, activities among the 4-H clubs reaches the heights, as this will be the first opportunity for the local members to exhibit the results of their summer's work. The Umatilla Project fair will be the zenith of local club activities, as all members of livestock clubs will exhibit their animals to complete their year's requirement.

Each county in the state is eligible to send a judging team to the State Fair, and competition is keen among the local clubs as to which club will be the one to be represented at Salem this year. The selection is made on a competitive basis, the three members of any one club whose total score is the highest, being the team that is awarded the trip to the fair.

One competitive meeting was recently held at the Eastern Oregon State hospital where R. A. Tillman, herdsman for the institution, had classes of Holstein and Jersey cattle, classes of hogs and a class of sheep

available for placing. It is planned to hold at least two more competitive meets before the state fair on September 22, before the final selection of the team to represent this county is made.

ADDITIONAL LOCALS

Moves to Bremerton.
Miss Charlotte Kern and her mother, Mrs. Kern, formerly of Hermiston, moved to Bremerton, Washington, this week where they will

make their home. Miss Kern was a teacher in the local schools last year.

Have Variety Store at Port Orehar

PORTUGAL

Travelers returning from the little-known country of Portugal report that it is the most honest country in the world. In the hotels the key to your room is hung on a hook outside of your door and nobody ever steals anything. You can leave your suitcase, your camera or your overcoat on a railroad train or a station platform or in a parked car on the street, and nobody bothers them. The people are polite and hospitable as well as honest. If a sudden shower comes up, house doors open and the occupants ask passersby to step in for shelter until the rain stops.

That sounds like an earthly paradise. It would be perhaps, if Portugal had a stable government. In the last twenty-six years there have been twenty-six revolutions. Under the present President, General Carmona, the little nation is getting along nicely.

POPULATION

Early reports from the Census office indicate that the decline in the birthrate in the past ten years is greater than ever. It begins to look as if, in another ten years we will have come to an annual increase of only 500,000 or less than one half of one percent, in population. And that

will not grow so fast. New schools will be needed. Fewer homes will be built. The preparation of elderly people to living will be larger, and old age pensions and retirement funds will become matters of prime importance. These are not considerations for the distant future. They are based upon facts which are here, now, and may affect economic conditions very soon.

SKYSCRAPERS

New York's newest skyscraper, to occupy an entire city block on the East River waterfront at the foot of Wall Street, will be 105 stories high. There is no economic limit to height except the congestion of traffic which comes from crowding so many people into a small area.

Cincinnati has a new solution for the skyscraper problem. A new building going up there will be 46 stories high and will be a combination of office buildings hotel and parking garage, with two large department stores and numerous specialty shops on the lower floors.

In the old days business men and their employees used to live "over the shop." We may be coming back to that in the big cities, with apartment houses in the upper floors to house the people who work in the stores and offices below.

INSECTS

The other day at my farm home we started to replace a worn door sill. When we took the old board off we found that black ants had eaten away the heavy timber which forms the sill of the house itself, for a distance of several feet. We took out more than two quarts of ants and about a pint of ant eggs, and then had the expen-

sure job of fitting a new timber in place. The war between man and insects is relentless and unceasing. Along the country roads near my home I frequently meet this Summer the U. S. Department of Agriculture "bug men" who are spraying trees in the effort to get rid of the Japanese beetle, our newest insect pest. I found a great colony of tent moths in an old pasture beyond my woodlot. A new pest is beginning to eat up oak and maple trees up our way; another is destroying the willows along the brook and river.

Most of these pests, like the gypsy moth which is killing the New England elms, and the chestnut blight, which has destroyed every chestnut tree in the East, are imported. The Government maintains a plant quarantine, but every now and then some new pest slips across the border.

PRESSURE

Ice which will not melt at a temperature of 180 degrees is the latest scientific curiosity. It has been produced by Professor P. W. Bridgman of Harvard University. All that is necessary to keep ice from melting under a flame is to subject it to a pressure of 290,000 pounds to the square inch.

Professor Bridgman's experiments with high pressures have given many surprising results. Many familiar substances change their characters under pressure, much as human beings do. Thirty-nine different metals become better conductors of electricity. Some of the changes persist after the pressure is removed.

What is the good of such experiments? Science doesn't know nor care. Science is content to discover new facts, leaving it to inventors to apply them to human uses.
