

Ancient Cannon Linked

With Japanese History
An old Dutch gun was recently located in the Kansaki shrine, Saga, by Prof. Choso Muto of the Higher Commercial college of Nagasaki, who is an authority on the history of the early Christian civilization. It has for a long time remained unknown to the public, but when Professor Muto visited the shrine and saw the gun, the marks it bears were declared by him to be those of the United East India company. The gun has also a letter 'H' on it, and Professor Muto believes this to stand for Hooru, a city in the Netherlands, where there was a branch office of the trading company. History records that on the outbreak of the riots in Shimabara and Amakusa by the Christians in 1637 against the Tokugawa government rule, the government ordered the governor to mobilize 100,000 troops to bring to an end the civil disturbance. The governor succeeded in defeating the rebels the following year with the assistance of Dutch men-of-war, which were then anchored off Nagasaki. Professor Muto connects this historical fact with the gun that has stood unobserved in the grounds of the Kansaki shrine.—Osaka Mainichi, Japan.

Cinema Traced to Idea of Photographic Camera

Although it is not possible to say that any one person definitely invented the cinematograph, writes the Paris correspondent of the London Daily Telegraph, a large share of credit for the development of this machine is undoubtedly due to the great French scientist, Etienne Marey. One of his pupils, Prof. Charles Richet, in recalling his outstanding achievements, described him as "the immortal creator of the cinematograph."
M. Marey made important contributions to physiology, as a student of the circulation of the blood, to medicine, to flying and to the cinema. Possibly it was his interest in the movements of animals, and particularly the flight of birds, which led him to concentrate his attention on the making of "moving" pictures. In 1852 he made a photographic "gun" with which he was able to take sixty pictures a second of birds in flight. By 1860 he had produced serviceable cameras and projecting instruments, and it is claimed that these were the first true cinematograph recording and projecting machines.

Growth of Brain

According to various authorities quoted in Halls' "Adolescence," the size of the brain increases but little after eight years. It reaches its maximum size at about 12 to 14, though there may be a very slight growth between 20 and 30. In old age it gradually loses weight and size. "In the boy of 15, the volume of cell bodies by already on the average 124 times their size at birth and by 30 will have increased to 180-fold. Cells constitute but a very small part of the total brain, so that they can increase many fold and not greatly affect its total size or weight."

Organized Beggary

While begging in Japan is not the same art and honorable calling that it is in some parts of China, nevertheless in Tokyo and other large cities there are hundreds who make their living by soliciting alms in public. Competition incident to a highly commercialized age has made it necessary for these mendicants to organize, and a beggars' guild now enacts and enforces beggars' law. The operations of these persons are limited to three hours each day and they have a Communistic way of sharing their pickings.

The San Diego divorce court suddenly came to life. It was the wife who was suing, and for a moment they thought she was a poet.
"My husband," she declared, "reminds me of the way the ocean is at times."
"You mean he's so grand," encouraged the court without cracking a smile.
"No," snapped the woman, "I'm referring to ebb tide—when it's all going out and nothing coming in."—Los Angeles Times.

Too Fluent

A war-weary Tommy, elated by prospects of going on leave, was approaching the docks at Boulogne. He had just asked the French porter some questions. A torrent of explanatory French followed. The soldier, weighed down by haversacks and equipment, stood stolidly listening and gazing intently at the porter. Finally the verbal torrent ceased. Then Tommy spoke again. "And 'ow does the shorn go, matey?" he asked.—Bainbridge's Book, "From Mad to Muffin."

Causes of Train Whistles
Among recent innovations is that of the first conventional railway accident. It happened at the opening of the Manchester and Liverpool railway, and the victim was a common laborer. Pumps had been killed before, but it was felt that, if the high and mighty were in peril, something must be done. So the railway engine whistles were invented to give warning of danger, and Rev. Sydney Smith said it sounded like the clanging signal of a lawyer that paraded off by his master the devil!

IRRIGON NEWS ITEMS

Mrs. W. C. Isom

C. ladies will serve supper at the dance which will be given October 25. The Grange is planning to give dances every two weeks.

No Loss

When Mary Louise visited in the country her aunt gave her a live rooster to bring home. Several weeks later her aunt visited Mary Louise's mother.

"Did you eat the rooster I gave you?" her aunt asked.
"No; he ran away," said Mary Louise. "But he was so old and tough we never would have eaten him, anyway."

Over-Edification

A fault common to most workers for an ardent cause is to lose sight of the strength of the opposition.—Women's Home Companion.

The largest cast iron pipe ever manufactured is to be used in the construction of a new submarine telephone tunnel under the Harlem river in New York. Seven feet in diameter, it will contain 148 clay conduits—enough to carry 150,000 telephone circuits or about 300,000 individual telephone wires.

Speaking by telephone to a business associate in London, 7000 miles away, was the novel experience recently of E. M. Adams, manager of the United Oregon corporation in Portland.

ADVERTS
By Charles Higgins

"HOME! RUN OVER THE PLATE EVERY TIME! EACH PITCH A STRIKE! NO FOULS! NO BASES ON BALLS! IF YOU WANT RESULTS, LET OUR ADVERTS PITCH FOR YOU! WIN, VISOR AND VITALITY! TRY OUR ADVERTS!"

Quick Action

Most folks, when they decide to have a piece of printing done want it at once. We are well equipped to give prompt service on your work. Furthermore, it will not look like a hurry up job, since our ability to handle rush work enables us to give it the same careful attention that is given less hurried work.

CONCENTRATED SUNSHINE

Nature captures for you the Sunshine that filters over the mountains into the green meadows of Umatilla County. Many of the elements of sunshine which give health and vigor are present in the product of the dairy cow. Butter has been called "concentrated sunshine."

Butter is a natural food. It provides the substances which build and replenish bones and tissues. And Nature has given to Butter a charming, elusive flavors that imitative Man has never been able to duplicate.
