In ten years the nation's consumption of dairy products has increased one-third, and is still growing.

The dairy industry is the foremost example of what the individual farmer has been able to do to increase his profits by cooperation with his neighbors.

Not only cooperation in marketing, but cooperating in grading up dairy herds, accounts for much of the dairy farmers' general prosperity.

breeding. There is still a long way to go. Too many cows are not producing enough butterfat to pay for their board.
