Mr. and Mrs. R. V. Jones and family left Monday for some place in the mountains where they can pick huckleberries.

FEWER APPLES, SAME PEARS AND POTATOES ESTIMATED Pear and potato crops almost exactly the same as last year for the country as a whole and an apple crop considerably smaller are in prospect according to August government crop estimates just reviewed by the market news service of the state college extension service.

The pear crop is placed at 22,149,000 bushels compared with 21,487,000 bushels last year. Oregon's crop is estimated at 2,880,000 bushels compared with 2,988,000 bushels last year.

The country will raise 367,399,000 bushels of potatoes, the government estimates, compared with 375,518,000 last year. Oregon is expected to harvest only 4,620,000 bushels compared with 5,460,000 bushels in this state, however, are raising just as large an acreage this year as last, say private reports to the extension service.

Total apple crop of the United States is now placed at 133,824,000 bushels of which 90,513,000 bushels are commercial. This compares with 211,506,000 bushels last year for the total crop and 104,196,000 bushels for commercial. Oregon's total for this year and last is given at 4,950,000 bushels and 3,150,000 bushels respectively. Thus Oregon is probably to have a larger crop than a year ago, while the country as a whole will have a much smaller crop.

Oregon will produce more fresh prunes and less dried ones than a year ago, the crop estimates show. The dried prune tonnage in this state is estimated at only 17,500 tons compared with 27,000 tons last year. California's dried prune crop will be in advance of last year, while the crop in France is a little under a year ago, balanced off by a larger crop in Yugoslavia.

000 bushels compared with 21,487,000 bushels last year. Oregon's crop is estimated at 2,880,000 bushels compared with 2,988,000 bushels last year.
