## Local Happenings

Mr. and Mrs. Art. Beasley were Pendleton visitors Saturday.

N. A. Elder of Portland was a business visitor in Hermiston Tuesday.

Mrs. Levi Reeder, Mrs. Alice Stone, and A. W. Prann were Pendleton visitors Tuesday.

Emory Cox of Echo is an accident patient in the Hermiston Medical hospital.

Miss Grace Jackson, who has been employed in the sheriff's office in Pendleton for the past year, arrived home Saturday.

Mr. and Mrs. Joe Holland of Bend visited the first of the week with Mrs. Holland's parents, Mr. and Mrs. P. F. Ward.

J. M. Biker of La Grande came through Hermiston Saturday en route to Portland to attend the executive meeting of the American Legion, Department of Oregon. He plans to return Friday.

Kenneth Pierson and family moved to Umatilla Saturday.

Mrs. Ina Wessell was a business visitor in Pendleton Monday.

Mrs. L. P. Fraker of Holdman was a business visitor in town Tuesday.

Another Masonic relief dance will be given in the Auditorium Saturday, February 4.

B. J. Nation, who has been quite ill for the past three weeks, is able to be back on the job as night watchman.

The Misses Florence Pearson and Barbara Wessell, and George McKenzie motored to Pendleton Sunday.

Wm. Grogan, brother of Mrs. Gerald White, underwent an appendicitis operation last Friday in St. Anthony's hospital in Pendleton. He is improving.

Mr. Nugent and Ray Erwin, both of Umatilla, were entered in the Hermiston Medical hospital this week as accident cases.

Mr. and Mrs. Cecil Kelley, who have been living in LaGrande, moved to Umatilla Monday, after spending a week with Mrs. F. L. Kelley here.

Mrs. Wm. Sanders returned last Wednesday from spending a week at Eagle Creek, Or., with her husband. Mrs. Sanders lives here with her mother, Mrs. Simmons.

Mrs. E. E. McPherson entertained with a dinner party and bridge Sunday evening complimenting her husband on his birthday. Covers were laid for twelve. Mr. and Mrs. J. M. Norton won family prize for high honors.

**HIGHEST CASH PRICES PAID FOR CREAM AND EGGS**  
Columbia Creamery Co., Inc.  
129 N. 21st St. — Portland, Or.

Mrs. Rena Waterman, who has been visiting in Seattle since the Christmas holidays, returned home Saturday and has been confined to her home since with the flu.

Reserve the date for the Masonic relief dance Saturday, February 4, in the Auditorium. Adv.

Mr. and Mrs. Joe Marshall of Tacoma, Wa., visited at the home of Mr. and Mrs. Baxter Hutchison, last Friday. Mrs. Marshall is Mr. Hutchison's step-mother whom he has not seen for 35 years.

### TEN MOST OUTSTANDING ACCOMPLISHMENTS NAMED

What he considers the 10 greatest accomplishments of the Oregon Agricultural experiment station have been listed by Dr. W. A. Schoenfeld, present director of the station who joined the state college staff but recently and hence had no connection with the work he lists as most outstanding. Here is his list which necessarily omits many achievements others might place at the top:

1. Discovery of a method of removing spray residue from fruit. His emergency achievement saved Oregon's crops in the crises and is now standard the world over.
2. Discovery of the cause and control of infectious abortion in cattle. The "Oregon System" of control at this state in the front rank in its vital work.
3. Introduction of Federation wheat. This variety, which averages from two to five bushels above others, is now the most widely grown wheat in the entire north-west.
4. Development of the system of rearing poultry for egg production. His revolutionary idea produced the first 300 egg hen and started Oregon's poultry industry.
5. Discovery of life history and control of the codling moth under Oregon conditions. This pioneer work by Dean A. B. Cordley was forerunner of subsequent disease and pest control work that makes commercial fruit growing possible.
6. Development of the Oregon soil seed industry through introduction of new forage crops. The industry is based largely on 20 new introductions by the station.
7. Improvement of old summer plow methods in eastern Oregon. His improved system is credited with increasing yields about six bushels per acre.
8. Control of liver flukes in sheep and goats. The station found the soil alternate hosts of the flukes and devised means of eradicating them.
9. Discovery of a new and simple method of fowl pox control. A new system of vaccination makes necessary further losses from this devastating poultry disease.
10. Dr. Schoenfeld selected these from scores of others listed in a new condensed report on agricultural research accomplishments said to return 10 to 15 million dollars a year to the state. More than 300 problems are now under investigation and more than 100 others requested have been discontinued or not started for lack of funds.

### INTEREST IN UMATILLA RAPIDS REVIVED.

(Continued from Page 1)  
necessary bureau. He explained that his action last spring regarding the postponement of the proposed construction on the Wallula cut-off highway was based upon the fact that the proposed route was 13 feet below the crest of the proposed Umatilla Rapids dam, which would render the highway useless in the event of such construction at that point.  
The chairman next introduced Senator Ritner, Oregon Legislator and a resident of Umatilla county for 50 years, who stressed the importance of navigation in the development of the Columbia river. He stated that the saving to the farmers in the Inland Empire made through navigation, alone, would more than pay for the construction of such a project, with five million bushels of wheat being shipped from Umatilla county in one year.  
Mr. Notson of Heppner pointed out that the time had come in our nation when it was necessary to decentralize the cities and bring the population back to the farm.  
Mr. Harrison of Pasco, Wn., continued the thought opened by Mr. Notson, and stated that he believed the thing that was needed was the development of the west and then the cities would follow. "I believe," he said, "that the key to cheap power would unlock the entire resources of the Inland Empire."  
Mr. Hartman of Pendleton, who has been connected with the Umatilla Rapids association since its organization, explained the problems that must be faced in this rejuvenation plan, for which this meeting was called.  
Mrs. Walter Pierce expressed her pleasure at being able to visit this community, and especially her interest in the cooperative enterprises in evidence here.  
Before the meeting adjourned it was proposed that a committee be appointed to work out a program with the present board of the Umatilla Rapids association that would put the association back on a working basis. The committee will be announced later but E. B. Aldrich was named to appoint the place and time of the meeting.  
Music was furnished during the evening by the Hermiston High school orchestra and mixed chorus, under the direction of Elwin Knapp, music instructor.  
One-hundred and twenty-six people were served at the banquet.

### "Vigorbilt" Volleys

When purchasing any article, the buyer usually considers quality before price. The same should hold good in buying chicks. It is wise economy, as conditions now exist, to have chicks that will mature into high producing hens. A high quality chick must come from healthy, high producing ancestors; hatched light and grow rapidly to maturity. When, if properly fed and otherwise cared for, will lay a maximum number of eggs.  
Millions of good chicks are ruined each year by improper brooding, care, and feeding. Even the high quality chick cannot withstand improper care. It is well to look carefully to the details of brooding and feeding, if chicks are expected to make high producing hens.  
The cost of the chicks when raised, and the producing ability of the pullets are of a great deal more importance from the standpoint of profit and loss than is the price of the baby chick when bought. Inspection of every flock can be made, if desired, by customers who contemplate buying chicks or pullets at "Vigorbilt" Poultry Farm and Hatchery. We'll gladly show you. The price of chicks will be right, and quality will prevail.  
See the trapnest operations at "Vigorbilt" Farm.  
Yours for Quality,

"VIGORBILT" POULTRY FARM and HATCHERY.  
Hermiston, Oregon.

### ELECTRIC HOTBEDS SHOWN TO BE HIGHLY PRACTICAL.

How to have the advantage of electric heat for hot beds or propagating benches at reasonable cost is described in a recent bulletin from the Oregon Experiment station written by F. E. Price and C. J. Hurd, agricultural engineers.

Though of comparatively recent origin, the electric soil heating devices have set the pace among farm electrical equipment for quick popularity.

Even before the experiment station workers had perfected the equipment to the point where they were ready to recommend it generally, growers and especially propagators of ornamental plants, were installing the equipment then being experimented with and were getting such satisfactory results that demand for more information was insistent.

The present illustrated bulletin is the result of the extensive experimenting that has been carried on at Corvallis and with cooperators in commercial work in various parts of the state. Costs and procedure have been carefully worked out so that the bulletin as issued forms a handy guide to anyone contemplating installing such equipment, or it will help answer the question of whether such equipment will pay in a given situation.

Advantages listed for the electric beds over the usual manure hot-beds include automatic temperature control at any desired point, resulting in better quality plants; rate of growth can be controlled, plants can be grown to transplanting size more quickly, and the electric beds can be used two or more times in one season. Soil heating cable costs only \$5 for a 6 x 6 foot bed, and a thermostat from \$5.75 to \$11, so installation costs are not excessive.

Advantages of the electric beds over greenhouses for plant growing include much smaller initial cost, elimination of need for extra cold frames, elimination of use of "flats" for the seedlings, and elimination of much labor by the new method.

For use in propagating beds for cuttings the electric equipment has given such amazing results that its effect is being felt in the industry. Cuttings are rooted in a fraction of the usual time and some species never before propagated that way are rooted with ease.

### 1932 BIGGEST NEWS STORIES ARE SELECTED

(Continued from page One)  
Walker's Resignation.

Jimmy Walker, idol of New York, stepped out of the 1932 political picture with his sudden resignation as mayor in the midst of a legislative hearing before Governor Roosevelt on his conduct in office. The hearing assumed national importance, as Roosevelt was then candidate for

the Democratic nomination for President.

The great underlying news throughout the year was the struggle against economic conditions.

Strangely enough, the depression was not represented greatly in the news save as other news reflected it. It was reflected in the bonus and "hunger" marches, in the middle western farm strike, in the war debt developments, in the activities of the R. F. C., and in the Lausanne conference.

ANSWER TO LAST WEEK'S "YOU'D BE SURPRISED." An African explorer states that the ostrich does sometimes thrust its head in the sand, but not for the purpose of hiding, but because it is seeking for water, which it frequently finds beneath the sand of the desert.

## THE RED & WHITE STORES

The Sign of a Dependable Store

## You can save money at Burnham's!

**WHY?**  
We are cooperative. We buy through United Grocers—Biggest and best buying corporation in the entire West. Not a wholesale house, but self-owned, by its members. A buying corporation.  
We can pass this on to you only as you buy from us. We enjoy competition—We enjoy comparison of prices on quality merchandise. We enjoy a visit from you to our store. Don't feel like you are obligated to buy, come in. Look around—use our phone!
