CHRISTIAN SCIENCE CHURCHES

"Spirit" was the subject of the Lesson-Sermon in all Churches of Christ, Scientist, on Sunday, August 6.
 The Golden Text was, "Teach me to do thy will; for thou art my God; thy spirit is good" (Ps. 143:10).

Among the citations which comprised the Lesson-Sermon was the following from the Bible: "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God" (1 Cor. 2:12).

The Lesson-Sermon also included the following correlative passage from the Christian Science textbook, "Science and Health with Key to the Scriptures", by Mary Baker Eddy: "The universe of Spirit is peopled with spiritual beings, and its government is divine Science. Man is the offspring, not of the lowest but of the highest qualities of Mind. Man understands spiritual existence in proportion as his treasures of Truth and Love are enlarged" (pp. 264, 265).

Butter Creek-Minneha

UNTIL WE LEARNED BETTER

Until we learned better, we used to mix wood and steel in our car bodies and wheels.
 It was the best way to make bodies—then. But the state of the art has advanced.
 Of course, it is more expensive to make an all-steel body than to make a wooden frame and nail steel panels on to it. The better way involves an initial expenditure of several millions of dollars for new dies, which renders a change very costly. Cars, especially large expensive cars which are produced in small volume, cannot afford this, because the dies cost as much for one car as for a million. That alone explains why all-steel bodies are not used in all cars.
 But our basic policy from the beginning is to make a good car better, regardless of cost.
 For example, when we discarded wood-steel body construction, it was not because we lacked wood. We still have some thousands of acres of the best hard wood in America. Economy would urge us to use up the wood first, and then adopt the better all-steel body. But we decided that quality was more important than expense.
 We weighed the reasons, for and against, before we made the change.
 We could see only one reason for retaining a mixed wood-and-steel body—nailing the metal on, instead of welding an all-steel body into a strong one-piece whole. That reason was, it would be cheaper—for us.
 Our reasons for adopting an all-steel body were these: A wood-steel body is not much stronger structurally than its wooden frame. In all American climates, wood construction weakens with age. Every used car lot gives evidence of this. Rain seeps in between joints and the wood decays. A car may have a metal surface, and yet not be of steel construction. Under extreme shock or stress the steel body remains intact—dented perhaps, but not crushed.
 Steel does not need wood for strength or protection. Wood is fine for furniture, but not for the high speed vehicles of 1933.
 In the Ford body there are no joints to squeak, no seams to crack or leak.
 The all-steel body is more expensive—to us, but not to you.
 By all odds, then, steel bodies seem preferable.
 Wheels also have become all-steel. No one argues that an electrically welded one-piece steel wheel, such as the Ford wheel, needs to be "strengthened" by adding wood to it.
 The one-piece all-steel body is the strongest, safest, quietest, most durable body made. That is our only reason for making them.
