The beautiful park proposed at Hermiston is not designed for Hermiston alone, nor for those in the near locality, but for all who wish to come from all the more distant communities. It will be theirs as well to use and enjoy. The planners have had this, and the government has had its central availability to so many people in mind, when funds were sought and allotted.

The big part of this park is provided by the government, and it is for good American citizens. The new fund will provide labor for a number of men through the fall and winter season and when spring comes in 1936, the blossoming out of a real park for the people of two counties will be a materialized vision picture. This is what the promoters of the enterprise and the park board have been developing.

Retention of the old Capitol site is the growing sentiment throughout the state. If more ground is needed for the proper provision of a suitable building now and for the future, let the state legislature vote to enlarge the old site, either by buying the Willamette University grounds or other adjoining lands.

The state has investments in the old site that it cannot realize on sufficiently to replace suitable grounds. When property owners desire to sell to the state they always want plenty. When the state tries to sell its lands they usually go at a low figure. The state has a fine building in the supreme court structure, and this would be reduced in value and convenience. The old site is handy to hotels and transportation facilities, and anyway, why change when everybody old enough has been going there for 50 years and the younger generations all know the trails that lead to building where the most of the history of the state has been recorded.

Madam Rumor has it going that Willis E. Mahoney, the doughty mayor of Klamath Falls, and the democratic contender in the last primary campaign for the governorship, is known to be available timber for the democratic nomination for U. S. senator, in a campaign against Senator C. L. McNary in 1936. He then certainly demonstrated his ability to get votes as against Governor Martin and with this known quality he is likely to receive the nomination.

What he can do in the field against Oregon's senior senator by a year from November will depend much on the standing of the na-

tional democratic party. McNary is strong and has had a powerful following in Willamette valley. In Portland he should receive strong support because of his interest in Bonneville. If Governor Ross goes against Senator Borah, and Mahoney against McNary, the eyes of the nation will be watching the conflict.

Rural rehabilitation does not mean just the restoring of land to better service. It means more than that. It means picking up the lost threads in the life of very capable men and families who have lost out in the agricultural struggle. Those worthy citizens, who, through no fault of their own, have lost everything, and who yet have ability and integrity to come back. These people will be given another chance through the use of good land and cheap money, not merely to escape the relief rolls, but to face the world in the pride of independence. It may be paternalistic; it may be socialistic; and for aught we know it might smack of a little communism—but through it all runs a chord of justice. For forty years or more agriculture has been headed downward and a lot of oxygen is needed injected into its system to restore it to normalcy.

They talked river at Pendleton last week. On the next day after they talked river at The Dalles. Then a Walla Walla paper said something about barges and rates. At Lewiston they rise up once in a great while. Pasco has its hands full most of the time. But NOBODY talks Umatilla rapids dam. It is the key, still, to the whole adventure yet no one is turning it. This job is just like all the others. If you, and the rest of us don't do it—we who are living right here and know its importance, and who are directly interested in it as our own—if we do not stir up public and political sentiment, then the white maned horses will continue their rapid speed on over the rapids.

HOME TALENT VAUDEVILLE AT OASIS SATURDAY.

At the big midnight show Saturday, a number of local boys and girls will perform. There will be dancers, musicians and comedians. Free hats, noisemakers and balloons will be handed out by two local boys made up as black faces. On the screen W. C. Fields in "The Man on the Flying Trapeze" and two cartoons complete the program.

PICTURE FROM JACK LONDON NOVEL BOOKED.

Jack London's celebrated story of the north country, "The Call of the Wild," which was filmed last summer with many outdoor scenes taken near Mount Baker, Washington, will be shown at the Oasis theatre Friday and Saturday.

Clark Gable and Loretta Young are the stars. The picture is said to deviate somewhat from the London novel so that the famous dog Buck figures as a subsidiary character to the story of the rush for Alaskan gold. Gable has the role of a prospector. Miss Young is the wife of a man who has been lost somewhere in the wilds and whom Gable rescues.

A villainous character is played by Reginald Owen, and a humorous one by Jack Oakie. Katherine DeMille, Sidney Toler, Frank Conroy and James Burke have supporting roles. Mickey's Band Concert, the only all colored Mickey Mouse cartoon, is on the program.

Home Seekers Here.

Six Nebraska home seekers were here this week looking over prospects for homes, brought here by an agent of E. P. Dodd. They returned today to report to their friends and will return early in October. Among them were several probable buyers of ten, twenty or forty acre tracts. adv.

A steamship line between Moscow and Archangel, to be opened this year, is said to be the longest river in the world.

ADDITIONAL LOCALS

(Continued from Page 1)

A delightful one o'clock luncheon was served Tuesday afternoon at the home of Mrs. O. O. Felthouse by members of the Methodist Ladies Aid society. Attractive bowls of garden carnations and baby breath centered the tables. Covers were laid for 29 guests. Mrs. R. H. McAttee, Mrs. Ida Simmons and Mrs. Felthouse acted as hostesses.

Mr. and Mrs. Enos D. Martin and daughter Anna Ray and sons Dick, Jack and Bob motored to Portland and Corvallis Saturday. Anna Ray, Dick and Jack enrolled at O.S.C.; the two former students in their second years and Jack to complete his engineering course.

 Evening evangelistic service, 7:45 P. M.
 All are Invited to Come

NOTICE TO CORRESPONDENTS.

Country correspondence that does not appear in this issue reached us at too late a date to be printed. It will be published next week.

CHRISTIAN SCIENCE CHURCHES

"MATTER" was the subject of the Lesson-Sermon in all Churches of Christ, Scientist, on Sunday, Sept. 22.

Among the citations which comprised the Lesson-Sermon was the following from the Bible: "Put not your trust in princes, nor in the son of man, in whom there is no help. His breath goeth forth, he returneth to his earth; in that very day his thoughts perish" (Ps. 146:3, 4).

The Lesson-Sermon also included the following correlative passage from the Christian Science textbook, "Science and Health with Key to the Scriptures", by Mary Baker Eddy: "Human belief—or knowledge gained from the so-called material senses—would, by fair logic, annihilate man along with the dissolving elements of clay. The scientifically Christian explanations of the nature and origin of man destroy all material sense with immortal testimony. This immortal testimony ushers in the spiritual sense of being, which can be obtained in no other way" (p. 490).

Grass Halts Soil Erosion

Grass not only prevents erosion, but well managed grazing land loses less fertility, because less is taken from the soil by pasture plants and part of that which is removed is restored by herds. Land planted to corn on an 8 to 10 per cent slope in Missouri and North Carolina loses from 15 to 17 tons of soil an acre annually. Land growing bluegrass or lespedeza loses only 0.8 to 0.9 ton an acre. Similar results were obtained in a comparison of the native grass sod and cleaned tilled kaffir in central Kansas, and of cotton and grassland in southern states. Decaying grass roots keep the soil porous and favorable to the absorption of moisture.

Stomach Worms in Lambs

Experiments conducted at the North Carolina state college experiment station show that drenching for control of stomach worms in lambs is absolutely necessary especially where the lambs have grazed on permanent pasture. This applies to all lambs now on hand and the drenching should be continued until the first of November. The most practical method of control, however, is to change pastures as often as possible and drench only when conditions show this to be necessary. This method of control has given excellent results.

Along the Windrows

Peat may be stored and used for live stock bedding to replace straw.

Missouri had in 1,000 acres of buckwheat in 1935.

Many farmers in South Africa are paying their accumulated debts.

HERALD WANT ADS PAY

Greetings!

To all Round-Up officials, county fairs and rodeo in this section of the state All such activities help to publicize our county and we welcome them all.

SPORTS FANS FOLLOW THE AMERICAN BOY.

Boys and young men of this city who wish to improve their tennis service, their basket-shooting eyes, their forward passing talent, or their crawl stroke, can enlist the aid of the nation's foremost coaches and players by subscribing to THE AMERICAN BOY magazine and following the sports interviews and fiction stories that appear each month.

"When I was in high school," says a famous decathlon champion, "I read a track article in THE AMERICAN BOY that gave me my first clear-cut idea of the western style of high jumping. At practice I laid the open magazine on the grass and studied it as I worked out. That afternoon I increased the height of my jump three inches."

That was a long time ago, but today thousands of future champions just as eagerly follow THE AMERICAN BOY.

"This year," states Griffith Ogden Ellis, editor, "our staff writers have gone to the two greatest football teams of the country—Minnesota and Pittsburgh—for first-hand tips on strategy, blocking, tackling, passing, and the fine points of play. They have interviewed Jack Medina, the world's fastest swimmer and his coach, Ray Daughters, gone to Eastern High School of Washington, D. C., Eastern Intercollegiate basketball champions. In the past they have followed the Grapefruit Circuit of the major leagues in Florida, sat on the bench at the Rose Bowl, sought out the famous runners, divers, All-American ends, tackles and backfield men, to bring their story of how to play the game to the young men of America.

"In addition to our fiction, adventure, exploration, hobby counsel, and vocational help, we shall continue to encourage young men to im-

prove their game in every line of sport."

Send your subscription to THE AMERICAN BOY, 7430 Second Blvd., Detroit, Mich. Enclose with your name and address \$1 for a year's subscription, \$2 for three years, and add 50 cents a year if you want the subscription to go to a foreign address. On newsstands, 10c a copy. adv.

Soy Beans Tried in Malheur.

ONTARIO—To determine their adaptability as feed crops and their value as green manure crops, 16 varieties of soy beans have been planted, in cooperation with the county agent, on the farms of George Lang on the west bench of the Vale irrigation project and Harry D. Wells on the east bench. The plantings on the Lang farm are on land that has been cropped for three years to grain and clover and heavily manured, and the plantings on the Wells farm are on land just cleared from sage brush.

It's always fair weather where we make Chesterfields

"Weather machines" in the Chesterfield factories keep the heat and moisture at a steady even level . . .

This control of temperature and humidity helps to retain the full flavor and aroma of the tobaccos you smoke in Chesterfields.

And it has a great deal to do with providing the proper working conditions for the employes who handle the tobaccos and operate the Chesterfield machines.

Mild ripe tobaccos and modern up-to-date factories with proper control of temperature and humidity help to make Chesterfield . . .
