

FARM CO-OPERATIVE DIVISION

A MESSAGE TO EVERY MEMBER.

LIVESTOCK SHIPPERS GROUP ACTIVE

There will be a small shipment of livestock to Portland by the Umatilla Cooperative Livestock Shippers' association on Saturday, October 24. The first regular shipment will be on November 7 and the next will be November 21. Regular marketing days will be the first and third Saturdays of each month. These dates are subject to change with due notice given prior to the change.

At the organization meeting held late in September the articles of association and the by-laws of this cooperative were adopted and temporary board members, representing each of the seven districts, were elected. These temporary board members were the men who served on the organization committee as representatives from different granges, the farm bureau, and the cooperative council. The board members are E. Skovbo, Boardman Grange; A. E. McFarland, Irrigon Grange; Ed. Dunning, Westland Grange; Clint Jackson, Umatilla Project Farm Bureau; Henry T. O. Cooperate Council; Lew Mossie, Stanfield Grange, and Joe Dupuis, Echo Grange.

The first annual meeting of the association will be held the fourth Tuesday of January, 1937. At this time the regular board of directors will be elected, one from each of the seven districts at up.

At the first board meeting, Clint Jackson was elected to serve as the chairman of the board of directors, Ed. Dunning, vice-chairman, and W. A. Sawyer, secretary-treasurer. Lyle Tilden was appointed manager of the association.

The purpose of this association is to collect or gather and ship livestock to the Portland market. The stock handled by the association will be handled on each member's own account. In other words, the association merely makes it possible for the members to ship in larger lots by rail, which in turn gives shippers some advantage in price on the market and makes it possible to have the representative, the manager, at the yards in Portland when stock is weighed and sold.

Farmers wishing to ship cattle, hogs or sheep to the Portland market through the association are asked to get in touch with Lyle Tilden of Hermiston, or with the assistant county agent, letting them know the number of head and kind of stock to be shipped. Those who are not as yet members of this association may join and ship livestock by paying a membership fee of \$1. This gives them permanent membership in the association.

GRANGERS REPORT ON CONFERENCE

Reports on the annual state conference which was held in conjunction with the Umatilla County Council at Adams last week, were given at Westland Grange Monday night by Floyd Laird, who attended the conference for Masters. Also by Mrs. E. H. Dunning, lecturer, Mrs. Chas. Seeliger, secretary, Don Sherwood and W. A. Sawyer on legislative.

A change in the meeting night was voted to become effective the second Thursday in December. Following that date, meetings will be held the second and fourth Thursdays each month instead of the first and third Thursdays.

The next meeting of the Home Economics club was announced as an all day meeting with pot luck dinner served at noon, to be held at the home of Mrs. Jess Prindle, October 28th.

May God Bless Her. She and her husband have been married more than 60 years, yet she still looks young. Maybe that is because she is so full of life and so deeply interested in life. Her church, her club, her wide circle of friends take much of her time; nevertheless, she continues to make a home, a real home. Before he was of school age, she taught her oldest son to read, then led him to good books and in later years, encouraged him on when his wings were weak. To her, he owes a great debt. It's her birthday today. Many, many more and all of them happy, mother

Heard in the subway: "I'm down to my last dime and I see that five spot on the sidewalk. I beat two other guys to it an' shove it in my pocket an' lam. It was a phony all right but my landlady don't go to the bank 'til I'm in shape to make good so I don't get throwed outta my room."

IRRIGATION EFFECT SHOWN ON BERRIES

In years when heavier yields and better quality berries mean better returns, irrigation will pay, even in parts of the state where normal annual rainfall is heavy, but in years when prices are so low every pound is produced at a loss, the extra expense of irrigation will only add to the deficit.

This is the conclusion arrived at through records of 10 years experiments with irrigated small fruits at the central experiment station at Oregon State college. The summary of results for the decade has just been issued in the form of a station bulletin by Dr. W. S. Brown, head of the horticultural department, entitled, "Influence of Irrigation upon Important Small Fruits." The irrigation trials were carried out on Chehalis and Newberg series of soils, of which there are some 300,000 acres in western Oregon.

The 10 years' tests show that under the conditions of this experiment, Evergreen blackberries increased in yield 36.3 per cent, loganberries 58.4 per cent, strawberries 91.5 per cent, red raspberries 58.4 per cent and black raspberries 110.5 per cent. The irrigated berries of nearly all kinds were larger and more attractive, without material difference in acid or sugar content, taken as a whole, and "stood up" as well as the unirrigated fruits either canned or otherwise.

Strawberries proved the most profitable of all under irrigation. Although it cost \$50 more per acre to establish and to bring into bearing irrigated strawberries, they all showed a profit with the exception of Ettenberg 121, even through the depression years. The irrigation slightly delayed the picking time of strawberries, but it increased the size from 25 to 100 per cent, depending on the season and gave from 5 to 36 per cent more No. 1 grade berries.

In years when prices of Evergreen blackberries were at all reasonable, irrigation was found to be highly profitable. In 1932, however, with the price down to one cent per pound, a heavy loss was taken.

PERENNIAL WEED DRIVE IN OREGON

Oregon farmers and the many cooperative agencies interested in the agricultural future of this state are mobilizing to battle one of the oldest of all farm enemies, weeds. Under the leadership of the State College extension service, conferences have been held looking to the organization of all available resources so that farmers may have more and better information, cooperation from state, counties and the federal government, and in some instances private agencies, in the fight on the steady encroachment of perennial weeds in nearly all sections of the state.

In the final analysis, control of weeds is the problem of the individual farmer, but the effectiveness of his efforts is often determined in part by the degree of related activity by neighbors and public agencies. During the depression years when farm income was at the distress level, many of the weed eradication projects throughout the state were allowed to drop because the growers had no time or money to devote to anything but making a bare living, points out E. R. Jackman, extension agronomist at the college. Now, however, with farm incomes rising, producers are viewing with genuine concern the destruction of valuable land by perennial weeds.

Among a few of the immediate steps decided upon for the coming months are the following: The state college will prepare, as soon as possible, a bulletin on the control of weeds found most serious in this state. County agents who have had close experience with the various types will collaborate in preparing the bulletin. Mounted weeds are to be prepared so that all growers may become familiar with types not now prevalent in their districts. New equipment for spreading chemical for weed control is to be worked out by the experiment station if possible. The State Highway Commission, the State Planning board, and the county courts are to be approached regarding cooperation throughout the state.

The State Seed council and other agencies will examine into the possible changes in legislation that may be needed. The possibility of using WPA labor in some regions

for weed eradication work will be investigated. Finally, every effort will be made to obtain full benefits under the agricultural conservation program for weed control activities.

GROWERS RECOMMEND FLOCK OF 2000 TURKEYS

(Continued from Page 1)
ture of the turkey business is good and though over-production might come and prices go down, which might make hard conditions to inexperienced or poorly financed producers, any capable, well established grower need have no fears of the future of the business here. Because of the feed, climatic and marketing conditions, dangers of failure are largely eliminated here.

2000 Flock Favored.
H. G. Rankin had a part in the beginning of the turkey business for Mr. and Mrs. John McDevitt who now have a flock of 3500 birds on this project. Rankin furnished McDevitt with turkey eggs from his flock when they lived at lone four years ago and both producers have grown and expanded in their respective fields. McDevitt moved his birds to this project in September.

Rankin now has a flock of 2000 birds and expects to maintain an average flock of that number, believed to be the most profitable farm flock of turkeys. These birds were hatched in April and are ready for the November market.

Five Jamesway units were used this year in custom hatching 10,000 poults for producers, other than their own flock. The incubator house is arranged with proper ventilation and convenience. The Rankins expect to keep approximately 400 birds for breeding stock, some of which they will sell to other producers.

After raising turkeys at Willamina in the Willamette valley and at lone in this section, the Rankins believe this climate is much more suitable to turkey production due to sandy soil and hot sun.

The Rankins have been in the business for 15 years, starting with a small flock. Their present brooder house is heated by a hot water system and the hovers are lighted by electric lights to prevent piling and keep the birds active.

Turkeys Bring Prosperity.
A story of prosperity through the production of turkeys on a commercial scale may be told of Mr. and Mrs. I. C. Cox who live south of town on a 24 acre farm. Within the past two years they have built two porches and a roomy kitchen as an addition to their house, adding an electric refrigerator and making various improvements in the way of equipment.

The Coxes started with a few turkey hens for the first four years and then raised birds commercially, gradually increasing their flock until this year they have 1700 birds. They hatch their own poults in Master incubators with a capacity of 1400 turkey eggs. They also sold approximately 1000 poults, and eggs, to other producers.

One son, Emery Cox, has gone into the turkey business this year with 400 birds being ranged on the Bessie Spencer place near the Columbia school house in Columbia district. The poults were furnished by I. C. Cox and he expects to have a flock of 1000 next year.

The other sons, Richard, who is a student at Oregon State college, and Robert, a student at Albany college, are being assisted by their parents in obtaining instruction in higher education.

A fourth son, Ernest, is teaching in the high school at Kent, Ore.

Grange Card Party

The Stanfield Home Economics club will sponsor a card party Saturday, October 31, in the Stanfield Grange hall. Bridge, pinocle and five hundred will be in play. Hand made door prizes will be given. The public is invited to attend.

Grange Dance Saturday

The Westland Grange is sponsoring a dance Saturday, October 24, to be given in the Westland Grange hall, with music by the "Hot Shots." The public is invited to attend.

NOW YOUR FARM DOLLAR BUYS TWICE AS MUCH FROM US AS IT DID IN 1933!

HOGS

1933
227 lbs. of hog bought 1 U. S. Royal.

1936
227 lbs. of hog buys 2 U. S. Royals and 2 U. S. Tubes.

CORN

1933
53 bu. of corn bought 1 U. S. Royal.

1936
53 bu. of corn buys 2 U. S. Royals and a U. S. Tube.

WHEAT

1933
19 bu. of wheat bought 1 U. S. Royal.

1936
19 bu. of wheat buys 2 U. S. Royals.

COTTON SEED

1933
1310 lbs. of cotton seed bought 1 U. S. Royal.

1936
1310 lbs. of cotton seed buys 2 U. S. Royals and 2 U. S. Tubes.

U. S. FARM TIRE for tractors and farm equipment

The famous NOBBY design gives up to 20% MORE TRACTION than any other type of traction tire. Reduces costs—speeds up work.

U. S. NOBBY TRACTION for passenger cars and trucks

The extra traction tire for rough going in mud, sand or snow. Staggered nobs are self-cleaning and ride smoother on hard pavements. Longer-wearing Tempered Rubber tread assures more mileage.

U. S. ROYAL TRUCK TIRES (Balloon and High Pressure)

No other truck tire can match its money-saving features. 1. Tempered Rubber Tread. 2. Shock Ply Construction. 3. Two Piles of Spaced Cord. 4. Strongest Cord Body. 5. Strongest Beads.

WORLD-FAMOUS U. S. ROYALS for passenger cars

EXTRA SKID PROTECTION...U. S. Cogwheel Tread. EXTRA BLOWOUT PROTECTION...U. S. Safety-Bonded Cord Body. EXTRA MILEAGE... Longer-wearing U. S. TEMPERED RUBBER. "You'll Be Safer on U. S. ROYALS"

U. S. PEERLESS TRUCK TIRES (Balloon and High Pressure)

The outstanding tire of the medium price field. Many "U. S." quality features are combined to give you this rugged, broad shouldered tire at its amazing low price.
