ELECTRIC ONE WIRE FENCE

World's cheapest, most effective livestock fence. Controller plugged into light socket or battery gives wire harmless kick. Livestock won't go over or under it. We prove it.

SAVE 80% IN FENCING COST-PRIME
Save wire. Save posts, use stakes. No gates, use snap. No up-keep cost except about 10¢ monthly for electricity for A.C. one to 200 acres. 30 day trial. ON BATTERY. ASK FOR FREE DEMONSTRATION

I am pleased to announce that I have secured the agency for the Prime Electric One Wire Fence. Before you build any new fence or repair the old, I would like an opportunity to show you how to save 80% in fencing costs and have a more effective fence.

I have a very interesting book on Electric Fence that I will be glad to show you—it is full of pictures of all kinds of stock being fenced by a Single Wire Electric Fence, and facts and figures how this new method of fencing saves 80% in fencing costs.

When I tell you that one strand of wire will positively hold a herd or a bull—that one man can fence 10 acres in half a day—that you can build fence for as little as 3¢ a rod—you may think I am making some exaggerated statements.

That is why I want you to know all the claims made for the Prime Electric Fence are based on actual experience of thousands of farmers who have been using this method of fencing the past 5 years. They are used by many state colleges and approved by them.

A complete demonstration can be easily made in your barn yard. It is interesting to see your cattle take the first shock. Prime Electric Fence Controllers are made for use with batteries for those who have no electricity.

McCORMICK-DEERING—
the ONLY Cream Separator with
STAINLESS STEEL DISCS
with Electrically Welded Stainless Steel Spacers

Stainless Steel Discs—this amazing improvement in cream separators is another triumph for McCormick-Deering. Here is a cream separator that brings to your milk room the same positive assurance of cleanliness, sanitation, and safety that you demand of kitchen equipment.

Stainless Steel Discs are absolutely rustproof. They are made of tough, strong, closely grained metal that will stay the same for years—there is no soft coating to wear away. As a result, the bowl in the McCormick-Deering will remain in balance a great deal longer than one having ordinary tinned carbon-steel discs.

Call on us for a demonstration—see this latest and greatest achievement in McCormick-Deering Cream Separators.
