Long Life Is Built
Right Into the McCormick-Deering
Enclosed-Gear Mower

• Years of service lie ahead for the McCormick-Deering No. 7 Enclosed-Gear Mower. The entire operating mechanism, including the drive gears, differential, and countershafts, is assembled compactly in an oiltight gear housing and runs in a bath of oil.

Special oil seals at the ends of the main axle and flywheel shaft and the oiltight gear box prevent leakage and protect all working parts against entrance of dirt and other abrasive materials.

Come in and let us tell you about our complete line of haying tools—side rakes and tedders, self-dump rakes, sweep rakes, windrow and cylinder-rake hay loaders, hay stackers, and hay presses.

Above: This compact nest of enclosed gears runs in a bath of oil. The cover, B, makes the gear case dustproof and oiltight. Clutch is thrown in and out by lever, A.
